Knowledge in Action: Logical Foundations for Specifying and Implementing Dynamical Systems

Raymond Reiter

The MIT Press
Cambridge, Massachusetts
London, England

Contents

	Preface	xvii
	Acknowledgments	xix
1	**Introduction**	1
2	**Logical Preliminaries**	5
	2.1 First-Order Logic	5
	2.2 Second-Order Logic	12
	2.3 Exercises	15
	2.4 Bibliographic Remarks	18
3	**Introduction to the Situation Calculus**	19
	3.1 The Situation Calculus	19
	3.2 A Simple Solution to the Frame Problem (Sometimes)	23
	3.3 Deductive Planning with the Situation Calculus	35
	3.4 Formalizing Database Transactions in the Situation Calculus	39
	3.5 Exercises	41
	3.6 Bibliographic Remarks	44
4	**Foundations of the Situation Calculus**	47
	4.1 The Language of the Situation Calculus	47
	4.2 Axioms for the Situation Calculus	48
	4.3 Reasoning about Situations Using Induction	54
	4.4 Basic Theories of Action	58
	4.5 Regression	61
	4.6 Using Regression	67
	4.7 Regression with Functional Fluents	70
	4.8 Database Logs and Historical Queries	73
	4.9 Exercises	78
	4.10 Bibliographic Remarks	83
5	**Implementing Basic Action Theories**	85
	5.1 Logical Foundations of Prolog	85

5.2 Lloyd-Topor Normal Forms for Arbitrary Definitions and Goals 90
5.3 Basic Action Theories, Definitions, and Regressable Queries 95
5.4 Exercises 107
5.5 Bibliographic Remarks 108

6 Complex Actions, Procedures, and Golog 111

6.1 Complex Actions and Procedures in the Situation Calculus 111
6.2 An Elevator Controller in Golog 119
6.3 Implementation 122
6.4 Discussion 132
6.5 Proving Properties of Golog Programs 134
6.6 Summary 138
6.7 Exercises 140
6.8 Bibliographic Remarks 145

7 Time, Concurrency, and Processes 149

7.1 Concurrency and Instantaneous Actions 149
7.2 Concurrency via Interleaving 150
7.3 The Sequential, Temporal Situation Calculus 152
7.4 Sequential, Temporal Golog 155
7.5 The Concurrent, Non-Temporal Situation Calculus 164
7.6 Axiomatizing Concurrent Worlds 166
7.7 The Concurrent, Temporal Situation Calculus 167
7.8 Concurrent, Temporal Golog 169
7.9 Natural Actions 170
7.10 Exercises 182
7.11 Bibliographic Remarks 183

8 Exogenous Actions, Interrupts, and Reactive Golog 185

8.1 Interrupts 185

8.2 The Semantics of RGolog 187
8.3 An RGolog Interpreter 190
8.4 Example: A Reactive Elevator Controller 191
8.5 Interrupts with Priorities 198
8.6 Discussion 199
8.7 Exercises 202
8.8 Bibliographic Remarks 203

9 Progression 205

9.1 Logical Foundations of Progression 207
9.2 Two First-Order Progressable Cases 210
9.3 STRIPS Planning Systems 216
9.4 Strongly Context-Free Successor State Axioms 223
9.5 Progression and Relational STRIPS 224
9.6 An Open-World STRIPS 226
9.7 Correctness of Relational and Open-World STRIPS 228
9.8 Exercises 230
9.9 Bibliographic Remarks 231

10 Planning 233

10.1 A Simple Breadth-First Planner 233
10.2 Example: Planning in the Blocks World 235
10.3 Planning with Concurrent Actions 242
10.4 OCTOPUS: A Multi-Handed Blocks World Agent 247
10.5 A Simple Depth-First Planner 255
10.6 Open-World Planning 259
10.7 Planning vs. Nondeterministic Programming 275
10.8 Exercises 277

10.9 Bibliographic Remarks 280

11 Sensing and Knowledge 283

11.1 Knowledge in the Situation Calculus 283

11.2 Knowledge and the Designer's Perspective 292

11.3 Knowledge-Producing Actions 293

11.4 The Frame Problem for Knowledge-Producing Actions 294

11.5 Accessibility in the Initial Situation 302

11.6 Regression for Knowledge-Producing Actions 306

11.7 Knowledge-Based Programming 309

11.8 Discussion 327

11.9 Exercises 328

11.10 Bibliographic Remarks 332

12 Probability and Decision Theory 335

12.1 Stochastic Actions and Probability 335

12.2 Derived Probabilities 341

12.3 Exogenous Events 349

12.4 Uncertainty in the Initial Situation 359

12.5 Markov Decision Processes 363

12.6 Discussion 379

12.7 Exercises 380

12.8 Bibliographic Remarks 383

13 Concluding Remarks 385

Appendix A:
Some Useful First-Order Inference Rules 389

A.1 Decomposition Rules 389

A.2 Generation Rules 391

A.3 Success Rules 392

A.4 Proof Rules for Unique Names Axioms 392

A.5 Simplification Rules 393
A.6 Additional Success Rules 394
A.7 Examples of Proofs 394
A.8 Exercises 399

Appendix B:
The Qualification and Ramification Problems 401
B.1 Constraints and the Ramification Problem 401
B.2 Constraints and the Qualification Problem 402
B.3 Solving the Qualification and Ramification Problems 404

Appendix C:
Resources 407
