Position:

We are looking for an NLP/Machine Learning Engineer to join our core team.

Key responsibilities:

- Work closely with business and product personnel to understand and translate requirements into technical designs.
- Work with core team on architecting, prototyping, implementing and improving machine learning, text processing and entity recognition algorithms.
- Communicate capabilities of our technology to colleagues in business and product functions.

Requirements:

- Graduate degree in Machine Learning and/or Natural Language Processing.
- At least 2 years of Java programming experience, preferably in a non-academic setting.
- Pride in writing clean, reusable code.
- Ability to take ownership and work independently without close supervision.
- Strong ability to learn and apply new ideas and technologies.
- Ability to think out-of-the-box.
- Excellent writing and documentation skills
- Good communication skills and team player
- Ability to work flexible hours

Plus:

- Experience using AWS
- Interest and knowledge in entertainment, particularly movies, television, sports and books
