

Apple Technology Briefing

Mac OS X's Unix Roots and Current Tools

Automator

Your personal automation assistant.

Technology Update:

Apple Computer invites you to a Technology Update Briefing.

Join the always dynamic Steve Hayman from Apple Computer for a look at the command line, compilers, scripting environments, open source tools, etc.

Open to everyone

During the presentation, we will discuss or demonstrate:

- **Automator** and why it resembles Unix pipelines
 - **Applescript**, why it is either a great programming tool or a mutant language from the moon
 - **Xcode** and **Interface Builder** for creating applications
 - reusable frameworks included in OS X - how you can reuse our stuff and get a head start
-

Xcode

Fast-track apps for Mac OS X.

Learn about tools for code optimization

Watch and learn as he builds something with Xcode and Interface Builder and maybe a small amount of Objective-C. If we are lucky, this involves an inadvertent demo of the debugger when building a browser in less than five minutes.

AppleScript

Powerful, easy-to-learn automation for Macintosh.

Win an iPod!

Each person in attendance will have the opportunity to win various prizes, including an iPod.

Logistics:

Thursday April 6, 1PM - 3PM

Bahen Centre, 40 St. George Street, Room 1190
