

Mailing List Email:

Hi all,

What is requirements engineering?

If you can answer this question, I would like to invite you to participate in a study examining the effectiveness of multiple approaches to modeling, evaluating, and analyzing intentions in a goal model.

We hope to gain insights on how to best design tools for software modelers and stakeholders. Hence, we're looking for graduate student participants who have a basic understanding of requirements engineering and are proficient in English (both written and verbal).

If you fit these criteria, this is your chance to learn more about goal modeling. Participants will be given one-on-one feedback to help improve their own modeling skills. In addition, upon completion of the study, you have the option to be entered into a draw for a number of \$50 Amazon gift certificate(s). The study is expected to take approximately 60 minutes.

If you know people who fit the criteria and might be willing to participate, please forward this email and ask them to contact me.

The informed consent letter is available at <http://www.cs.toronto.edu/~amgrubb/study.pdf>. The letter informs you of the purpose of the study, and the risks and rewards associated with participating. Please review it carefully to help you determine if you wish to participate.

If you would like to participate or have any questions, please email me at amgrubb@cs.toronto.edu.

Thanks!

Alicia Grubb
