

Online and Other Myopic Algorithms

Allan Borodin

Denis Pankratov

DRAFT: August 10, 2023

This is a very preliminary version and hence will likely have technical errors, and incomplete or missing citations. Please do not distribute without permission of the authors.

Contents

Preface	1
1 Introduction	3
1.1 What is this Book About?	3
1.2 Motivation	4
1.3 Brief History of Online Algorithms	5
1.4 Motivating Example 1: Ski Rental	6
1.5 Motivating Example 2: Line Search Problem	9
1.6 Motivating Example 3: Paging	12
1.7 Historical Notes and References	14
1.8 Exercises	15
2 Deterministic Online Algorithms	19
2.1 Request-Answer Games	19
2.2 Competitive Ratio for Minimization Problems	20
2.3 Minimization Problem Example: Makespan	22
2.4 Minimization Problem Example: Bin Packing	25
2.4.1 <i>NextFit</i> , <i>FirstFit</i> and <i>BestFit</i>	26
2.4.2 Beyond <i>FirstFit</i> and <i>BestFit</i> : Harmonic Algorithms	34
2.5 Competitive Ratio for Maximization Problems	37
2.6 Maximization Problem Example: Time-Series Search	38
2.7 Maximization Problem Example: One-Way Trading	40
2.8 Temporary Input Items	42
2.9 Historical Notes and References	42
2.10 Exercises	45
3 Randomized Online Algorithms	47
3.1 Randomized Online Algorithm Template	47
3.2 Types of Adversaries	49
3.3 Relationships between Adversaries	50
3.3.1 The Power of an Adaptive Adversary	52
3.4 How Much Can Randomness Help?	53
3.4.1 An Example Where Randomness Does Not Help	53
3.4.2 When Even One Bit of Randomization Can Be Critical	54
3.5 Derandomization	57
3.6 A Randomized Algorithm for Paging	58
3.7 A Randomized Lower Bound for Paging	60
3.8 Yao's Minimax Principle	61

3.9	Yao's Minimax Principle Example: Lower Bound for Ski Rental	62
3.10	The General Knapsack Problem	64
3.11	Obtaining randomized competitive ratios with constant or high probability	68
3.12	Bounded memory and memoryless online algorithms?	68
3.13	Historical Notes and References	69
3.14	Exercises	69
4	Some Classical Problems	73
4.1	Potential Function Method Primer	73
4.2	List Accessing Problem	76
4.2.1	Deterministic Algorithms	77
4.2.2	Upper Bound on <i>MTF</i> via the Potential Method	78
4.2.3	Lower Bound on <i>MTF</i> via the Averaging Technique	80
4.2.4	A Simple Randomized Algorithm <i>BIT</i>	81
4.3	Load Balancing	84
4.3.1	Makespan in the Related Machines Model	85
4.3.2	Makespan in the Restricted Machines Model	87
4.3.3	Makespan in the Unrelated Machines Model	89
4.4	Call Control (Throughput Maximization) in Circuit Routing	91
4.4.1	Small Bandwidth and Proportional Values	92
4.4.2	Using Randomization for the Disjoint Paths Problem	93
4.4.3	Disjoint Paths on a Line Graph	93
4.4.4	Disjoint Paths for Tree Networks	95
4.4.5	A Negative Result for Arbitrary Networks	96
4.5	Metric Facility Location	96
4.5.1	Metric Spaces	96
4.5.2	The Uncapacitated Facility Location Problem	97
4.5.3	The Randomized Algorithm for Uncapacitated Facility Location	98
4.6	Online Steiner Tree Problem	101
4.7	Historical Notes and References	103
4.8	Exercises	104
5	k-Server and Metrical Task Systems	111
5.1	The k -server problem	111
5.1.1	Formulation of the k -Server Problem	112
5.1.2	Deterministic Lower Bound	114
5.1.3	k -Servers on a Line	114
5.1.4	k -Servers for a Tree Metric	116
5.1.5	The Work Function	117
5.1.6	The Work Function Algorithm	119
5.2	Metrical Task Systems	129
5.3	Metrical Service Systems and Layered Graph Traversal	131
5.4	Metric Spaces and Hierarchical Separated Trees	133
5.5	Lower Bounds for the Randomized k Server and MTS Problems	135
5.6	Historical Notes and References	138

6	Graph Problems	141
6.1	Input Models for General Graphs	142
6.2	Special Input Model for Bipartite Graphs	144
6.3	Vertex Cover	145
6.4	Hard Online Graph Problems	147
6.4.1	Maximum Independent Set	147
6.4.2	Maximum Clique	149
6.4.3	Longest Path	150
6.4.4	Minimum Spanning Tree	152
6.4.5	Travelling Salesperson Problem	153
6.5	Bipartite Maximum Matching	154
6.5.1	Deterministic Algorithms	154
6.5.2	A Simple Randomized Algorithm	156
6.5.3	The Ranking Algorithm	156
6.6	Weighted Bipartite Matching	159
6.6.1	The AdWords, Display Ads and Submodular Welfare Problems	161
6.7	Minimum Cost Matching	163
6.7.1	The Line Metric Revisited	166
6.8	Coloring	166
6.9	Historical Notes and References	174
6.10	Exercises	175
7	Online MaxSat and Submodular Maximization	181
7.1	Max-sat	181
7.1.1	Derandomization by the method of conditional expectations; Johnson's algorithm rediscovered.	183
7.2	A randomized max-sat algorithm with competitive ratio $\frac{3}{4}$	187
7.3	The unconstrained submodular maximization problem and the "two-sided" online algorithm	191
7.4	The natural randomization of the double sided-greedy algorithm	194
7.5	Max-Cut and Max-Di-Cut	195
7.6	Historical Notes and References	195
7.7	Exercises	196
8	Extensions of Classical Problems	197
8.1	Ski Rental Extensions	197
8.1.1	Multislope Ski Rental	197
8.1.2	Block Snoopy Caching	198
8.1.3	The Bahncard Problem	198
8.2	Bin Packing Extensions	201
8.2.1	Rectangle bin packing	201
8.2.2	Renting Servers in the Cloud	201
8.3	k -Taxi Problem	208
8.4	File Migration and Replication	210
8.4.1	The File Migration Problem	211
8.4.2	The File Replication Problem	212
8.5	Historical Notes and References	212
8.6	Exercises	213

9 Primal-Dual Method for Online Problems	215
9.1 Linear Programming and Duality	216
9.2 Online Primal-Dual Template	220
9.3 Primal-Dual Approach for Ski Rental	221
9.4 Primal-Dual Approach for Online Set Cover	223
9.5 Primal-Dual Approach for Load Balancing on Unrelated Machines	233
9.6 Bipartite Maximum Matching Revisited: Primal-Dual Analysis	236
9.6.1 An Economic Interpretation for the Ranking Algorithm analysis	238
9.6.2 Vertex Weighted Bipartite Matching	239
9.6.3 Edge Weighted Bipartite Matching	239
9.7 The Generalized Assignment Problem: The Small Bids/Large Capacities Assumption	239
9.8 Primal-Dual Approach for the Bounded Allocation Problem	240
9.9 Primal-Dual Approach for General Covering/Packing Problems	241
9.10 Historical Notes and References	242
9.11 Exercises	242
10 Online Convex Optimization for Online Decision Making	243
10.1 Introduction	243
10.2 Mathematical Preliminaries: Calculus, Convexity, Normal Cones	247
10.2.1 Calculus	247
10.2.2 Duality	249
10.2.3 Convexity	250
10.2.4 Normal Cones	251
10.3 The Main Mathematical Tool	252
10.3.1 A Geometric View	252
10.3.2 Convex Optimization View	254
10.3.3 Connection Between Two Views	259
10.3.4 Two Useful Inequalities	259
10.4 Fractional MTS Preliminaries	261
10.5 Fractional MTS on a Weighted Star Metric	262
10.6 Fractional MTS on Trees	267
10.7 Fractional Weighted Paging	269
10.8 k -Server on HSTs	272
10.9 Rounding of Fractional Solutions to Integral Solutions	274
10.9.1 Randomized Rounding for MTS	274
10.9.2 Randomized Rounding for Weighted Paging	276
10.9.3 Randomized Rounding for k -Server	279
10.10 Historical Notes and References	279
10.11 Exercises	279
11 Online Learning	281
11.1 Learning Experts: The Full Information Setting	281
11.1.1 The weight majority algorithm	282
11.1.2 The Multiplicative Weights (Hedge) Algorithm	284
11.2 Multi-Armed Bandit Problems	286
11.3 Portfolio Selection	287
11.4 Historical Notes and References	287
11.5 Exercises	287

12 Stochastic Inputs	289
12.1 The Random Order Model and the Secretary Problem	290
12.1.1 The Secretary Problem	290
12.1.2 The Ranking Algorithm in the ROM Model	293
12.2 I.I.D. Inputs	294
12.2.1 Bipartite Matching in the I.I.D. Input Model	295
12.3 Prophet Inequalities and Prophet Secretaries	302
12.3.1 The Prophet Secretary Problem	304
12.4 Multi-Item Secretaries and Prophets	308
12.4.1 The multi-unit secretary problem	309
12.4.2 Edge weighted matching in the ROM model	309
12.4.3 The Matroid Secretary Problem	311
12.4.4 Knapsack Secretary and GAP Secretary	312
12.5 Online and Random Order Contention Resolution Schemes	312
12.5.1 Multi-Item Extensions of the Prophet Inequality Problem	313
12.6 Stochastic Probing; The Query Commit Model	313
12.6.1 Stochastic Rewards: Unknown Stochastic Graphs	315
12.6.2 Stochastic Rewards: Known Stochastic Graphs and Known Type Graphs	318
12.7 The Online Pandora's Box Problem; The Price of Information Model	318
12.8 Covering problems and the Random Order Model	318
12.8.1 Facility Location	319
12.8.2 Bin Packing	319
12.9 Markov Process Arrivals	319
12.9.1 Markov Decision Theory and Optimal Paging	320
12.9.2 The Commute Algorithm	321
12.9.3 Analysis of the Algorithm	323
12.10 Poisson Arrivals	324
12.10.1 Preliminaries	325
12.10.2 The Regime of $c = o(1)$	326
12.10.3 The Regime of Constant c	327
12.10.4 The Regime of $c = \omega(1)$	331
12.10.5 Putting it together	332
12.11 Historical Notes and References	332
12.12 Exercises	335
13 Advice Model	337
13.1 Different Advice Models	337
13.2 Upper Bound Techniques and Examples	339
13.2.1 Now-or-Later	339
13.2.2 Follow OPT	339
13.2.3 Adapting Randomized Algorithms	341
13.2.4 Adapting Offline Algorithms	341
13.2.5 Combinatorial Designs	343
13.3 Lower Bound Techniques and Examples	345
13.3.1 Pigeonhole Argument	345
13.3.2 String Guessing and Reductions	347
13.3.3 Σ - and $\vee$ -Repeatable Problems	349
13.4 Advice vs. Randomness	351

13.4.1 Phase transitions for the number of advice bits	353
13.5 Advice Complexity Classes	354
13.6 Untrusted advice and online algorithms with predictions	355
13.6.1 Ski Rental	357
13.6.2 Paging	358
13.6.3 Makespan	359
13.6.4 Bipartite Matching	359
13.7 Historical Notes and References	359
13.8 Exercises	360
14 Real-Time Algorithms	363
14.1 Online Scheduling Algorithms in the Sense of Competitive Analysis	363
14.2 Real Time Scheduling	364
14.3 Minimizing Average Completion Time with Preemption	365
14.4 The Throughput Maximization Problem with Preemption	367
14.5 Metric Matching with Delays	367
14.6 Historical Notes and References	370
14.7 Exercises	370
15 Revocable Decisions, Parallel Threads, and Multiple Pass Online Models	371
15.1 Online with Revocable Acceptances without Penalty	372
15.1.1 Interval Scheduling with Real-Time Arrivals	372
15.1.2 Interval Selection with Any Time Arrivals and Call Control Revisited	376
15.1.3 Proportional and Convex Knapsack	377
15.1.4 The General Knapsack Problem	379
15.2 Online with Revocable Acceptances with a Penalty	380
15.3 More General Changeable Decisions	380
15.4 Online with buffers and the QoS Throughput Problem	380
15.4.1 The QoS Problem with Unbounded Span using an Unbounded Buffer.	381
15.4.2 FIFO Buffers and the QoS Problem for Uniform s Bounded Span	384
15.5 Other Online Applications using a Reorderable Buffer	386
15.5.1 Online Makespan for Identical Machines	386
15.5.2 RBM for Paging	387
15.5.3 RBM for Minimizing Switching Costs	387
15.6 Multi-pass Deterministic Online Algorithms	388
15.6.1 A Multi-pass Algorithm for Unweighted Bipartite Matching	388
15.6.2 A 2-pass Algorithm for Weighted Max-Sat	389
15.7 Parallel Online Streams	389
15.8 Historical Notes and References	389
15.9 Historical Notes and References	389
15.10 Exercises	391
16 Streaming	393
16.1 Motivating Puzzles	393
16.1.1 Missing Items	393
16.1.2 Frequent Items	394
16.1.3 Exact Deterministic Solutions vs. Approximate Randomized Solutions	396
16.2 Various Streaming Models	396

16.3 Sketching Technique	398
16.4 Estimating 2nd Frequency Moment	399
16.5 Lower Bounds via Reductions	402
16.6 Semi-streaming	402
16.7 Historical Notes and References	402
16.8 Exercises	402
17 Dynamic Graph Algorithms	405
17.1 Definition and Motivation of the Model	405
17.2 Warmup: Decremental Setting for Single-Source Unweighted Shortest Path	407
17.3 Maintaining Connected Components	411
17.3.1 Incremental Setting for General Graphs	411
17.3.2 Fully Dynamic Setting for Acyclic Graphs	412
17.3.3 Fully Dynamic Setting for General Graphs	417
17.4 Maintaining Minimum Spanning Tree	419
17.5 Maintaining Maximum Bipartite Matching	419
17.6 Historical Notes and References	419
17.7 Exercises	419
18 Priority Model	421
18.1 The Priority Model as a Model for Greedy and Myopic Algorithms	421
18.2 Matroids, Greedoids	423
18.3 Some other optimal and approximate greedy priority algorithms for maximization problems	424
18.3.1 Interval Scheduling	425
18.3.2 Throughput Scheduling and the Job Interval Scheduling Problem	427
18.3.3 Restrictions on Priority Algorithms	429
18.3.4 Weighted Set Packing and Beating the Natural Greedy Algorithm	429
18.3.5 Subset Sum	430
18.3.6 Maximum Matching in Graphs of Maximum Degree 3	433
18.4 Some optimal and approximate priority algorithms for minimization problems	438
18.4.1 Average Completion Time on One Machine.	438
18.4.2 Makespan	439
18.4.3 Set Cover	441
18.4.4 Vertex Cover	442
18.5 Priority Algorithms with Revocable Decisions	446
18.6 Priority Algorithms using a Stack.	447
18.7 Fixed Priority Algorithms with Advice	449
18.7.1 Motivating Example	449
18.7.2 Template for Proving Lower Bounds	452
18.7.3 Examples of the Application of the Template	454
18.8 Historical Notes and References	456
18.9 Exercises	457
19 Alternatives to Competitive Analysis	459
19.1 Resource Augmentation	460
19.2 Loose Competitiveness	461
19.3 Locality of reference	462

19.4 Bijective analysis	464
19.5 Relative Worst Order Ratio	465
19.6 Historical Notes and References	466
19.7 Exercises	466
20 Online Mechanism Design and Online Social Choice	469
20.1 Online Mechanism Design	469
20.2 Posted Price Mechanisms	470
20.3 Decentralized Mechanisms: Pricing Online Decision	470
20.3.1 The k Server Problem for the Line Metric	471
20.3.2 The Parking Problem on the Line	472
20.4 Voting	473
20.4.1 Budgetted Social Choice: Forming a Committee	474
20.5 Online Fair Division	474
20.5.1 Fairness Measures	474
20.5.2 Divisible Items	475
20.5.3 Indivisible Items	477
20.6 Historical Notes and References	479
20.7 Exercises	480
Appendix A Notational Index	481
Appendix B Probability Theory	483
B.1 Probability Space, Events, and Random Variables	483
B.2 Expected Value, Independence, and Conditioning	485
B.3 Variance and Basic Inequalities in Probability Theory	486
B.4 Martingales and Azuma-Hoeffding Inequality	487
B.5 Exercises	489
Bibliography	491
Alphabetical Index	511
