

Contents

Preface	1
Notation for Us	3
1 Introduction	5
1.1 What is this Book About?	5
1.2 Motivation	7
1.3 Brief History of Online Algorithms	8
1.4 Motivating Example 1: Ski Rental	8
1.5 Motivating Example 2: Line Search Problem	11
1.6 Motivating Example 3: Paging	14
1.7 Historical Notes and References	16
1.8 Exercises	17
2 Deterministic Online Algorithms	23
2.1 Request-Answer Games	23
2.2 Competitive Ratio for Minimization Problems	24
2.3 Minimization Problem Example: Makespan	26
2.4 Minimization Problem Example: Bin Packing	30
2.4.1 <i>NextFit</i> , <i>FirstFit</i> , and <i>BestFit</i>	30
2.4.2 Beyond <i>FirstFit</i> and <i>BestFit</i> : Harmonic Algorithms	38
2.5 Competitive Ratio for Maximization Problems	42
2.6 Maximization Problem Example: Time Series Search	42
2.7 Maximization Problem Example: One-Way Trading	44
2.8 Temporary Input Items	47
2.9 Historical Notes and References	48
2.10 Exercises	51
2.11 Open Problems	52
3 Randomized Online Algorithms	53
3.1 Randomized Online Algorithm Template	53
3.2 Types of Adversaries	55
3.3 Relationships between Adversaries	56
3.3.1 The Power of an Adaptive Adversary	58
3.4 How Much Can Randomness Help?	59
3.4.1 The Classify and Randomly Select Paradigm	59
3.4.2 An Example Where Randomness Does Not Help	60
3.4.3 Proportional Knapsack: When Even One Bit of Randomization Can Be Critical	61

3.5	De-randomization	64
3.6	A Randomized Algorithm for Paging	65
3.7	A Randomized Lower Bound for Paging	67
3.8	Yao's Minimax Principle	69
3.9	Yao's Minimax Principle Example: Lower Bound for Ski Rental	69
3.10	The General Knapsack Problem	72
3.11	Optimality of Time Series and One-Way Trading Algorithms	75
3.12	Obtaining Randomized Competitive Ratios with Constant or High Probability	77
3.13	Bounded Memory and Memoryless Online Algorithms	78
3.14	Historical Notes and References	79
3.15	Exercises	81
3.16	Open Problems	82
4	Some Classical Problems	83
4.1	Potential Function Method Primer	83
4.2	List Accessing Problem	86
4.2.1	Deterministic Algorithms	87
4.2.2	Upper Bound on <i>MTF</i> via the Potential Method	88
4.2.3	Lower Bound on <i>MTF</i> via the Averaging Technique	90
4.2.4	A Simple Randomized Algorithm <i>BIT</i>	91
4.3	Load Balancing	94
4.3.1	Makespan in the Related Machines Model	95
4.3.2	Makespan in the Restricted Machines Model	97
4.3.3	Makespan in the Unrelated Machines Model	100
4.4	Call Control (Throughput Maximization) in Circuit Routing	102
4.4.1	Small Bandwidth and Proportional Values	103
4.4.2	Using Randomization for the Disjoint Paths Problem	107
4.4.3	Disjoint Paths on a Line Graph	107
4.4.4	Disjoint Paths for Tree Networks	109
4.4.5	A Negative Result for Arbitrary Networks	110
4.5	Online Steiner Tree Problem	112
4.6	Historical Notes and References	116
4.7	Exercises	117
4.8	Open Problems	120
5	k-Server, Metrical Task Systems, and Other Metric Problems	121
5.1	Metric Spaces	121
5.2	The k -Server Problem	122
5.2.1	Formulation of the k -Server Problem	123
5.2.2	Deterministic Lower Bound	124
5.2.3	k -Servers on a Line	125
5.2.4	k -Servers for a Tree Metric and Weighted Paging	127
5.2.5	The Work Function	128
5.2.6	The Work Function Algorithm	130
5.3	Metrical Task Systems	139
5.4	Metrical Service Systems and Layered Graph Traversal	143
5.5	Hierarchically Well Separated Trees	147
5.6	Upper Bounds for the Randomized k -Server and MTS Problems	149

5.7	Lower Bounds for the Randomized k -Server and MTS Problems	151
5.8	Metric Facility Location	156
5.8.1	The Uncapacitated Facility Location Problem	156
5.8.2	Uncapacitated Facility Location with Uniform Opening Costs	157
5.8.3	Uncapacitated Facility Location with General Opening Costs	161
5.9	Historical Notes and References	163
5.10	Exercises	165
5.11	Open Problems	168
6	Online Learning, Regret and the Relation to Competitive Analysis	169
6.1	Learning Experts: The Full Information Setting	169
6.1.1	The Weighted Majority Algorithm	171
6.1.2	The Multiplicative Weights (Hedge) Algorithm	174
6.2	Multi-Armed Bandit (MAB) Problems	176
6.2.1	MAB in the Stochastic Setting	177
6.2.2	MAB in the Adversarial Setting	180
6.3	Unifying Results for Competitive Analysis and Regret Minimization	181
6.4	Historical Notes and References	188
6.5	Exercises	189
6.6	Open Problems	189
7	Graph Problems	191
7.1	Input Models for General Graphs	192
7.2	Special Input Model for Bipartite Graphs	194
7.3	Vertex Cover	195
7.4	Hard Online Graph Problems	200
7.4.1	Maximum Independent Set	201
7.4.2	Maximum Clique	202
7.4.3	Longest Path	204
7.4.4	Minimum Spanning Tree	205
7.4.5	Travelling Salesperson Problem	206
7.5	Bipartite Maximum Matching	207
7.5.1	Deterministic Algorithms	208
7.5.2	A Simple Randomized Algorithm	209
7.5.3	The <i>Ranking</i> Algorithm	209
7.6	Weighted Bipartite Matching	213
7.6.1	The AdWords, Display Ads and Submodular Welfare Problems	215
7.7	Min Cost Perfect (Metric) Matching	217
7.7.1	Deterministic Min Cost Perfect (Metric) Matching	218
7.7.2	Randomized Min Cost Perfect (Metric) Matching	221
7.7.3	Min Cost Perfect (Metric) Matching for the Line Metric	226
7.8	Graph Coloring	232
7.8.1	Coloring Arbitrary Graphs	233
7.8.2	Coloring Trees and Bipartite Graphs	235
7.8.3	Coloring d -Inductive Graphs	239
7.8.4	Coloring Interval Graphs	240
7.9	Historical Notes and References	241
7.10	Exercises	244

7.11 Open Problems	248
8 Extensions of Classical Problems	249
8.1 Ski Rental Extensions	249
8.1.1 Capital Investment	249
8.1.2 Multi-Slope Ski Rental	252
8.1.3 Block Snoopy Caching	255
8.1.4 The Bahncard Problem	256
8.1.5 File Migration	258
8.2 Bin Packing Extensions	261
8.2.1 Multidimensional Bin Packing	261
8.2.2 Vector Bin Packing	266
8.2.3 Renting Servers in the Cloud	269
8.3 k -Server Extensions	276
8.3.1 The Weighted- k -Server and Generalized- k -Server Problems	276
8.3.2 k -taxi Problem	286
8.4 Historical Notes and References	288
8.5 Exercises	292
8.6 Open Problems	292
9 Online Mechanism Design and Online Social Choice	295
9.1 Online Mechanism Design	296
9.2 Posted Price Mechanisms	296
9.3 Decentralized Mechanisms: Pricing Online Decision	297
9.3.1 The k Server Problem for the Line Metric	297
9.3.2 The Parking Problem on the Line	298
9.4 Voting	299
9.4.1 Budgetted Social Choice: Forming a Committee	300
9.5 Online Fair Division	300
9.5.1 Fairness Measures	301
9.5.2 Divisible Items	302
9.5.3 Indivisible Items	304
9.6 Historical Notes and References	307
9.7 Exercises	307
9.8 Open Problems	307
10 Linear Programming and Primal-Dual Method for Online Problems	309
10.1 Linear Programming and Duality	310
10.2 Online Primal-Dual Template	314
10.3 Primal-Dual Approach for Ski Rental	315
10.4 Primal-Dual Approach for Online Set Cover	317
10.5 Primal-Dual Approach for Load Balancing on Unrelated Machines	327
10.6 Bipartite Maximum Matching Revisited: Primal-Dual Analysis	330
10.6.1 An Economic Interpretation for the Ranking Algorithm analysis	332
10.6.2 Vertex Weighted Bipartite Matching: The Perturbed Ranking Algorithm	333
10.7 Edge Weighted Bipartite Matching and Online Correlated Selection.	334
10.7.1 The Outer Algorithm for Display Ads	335
10.7.2 A Brief Introduction to the Development of an OCS	336

10.8 The Generalized Assignment Problem	338
10.9 Primal-Dual Approach for the Bounded Allocation Problem	339
10.10 Primal-Dual Approach for General Covering/Packing Problems	340
10.11 Historical Notes and References	341
10.12 Exercises	342
10.13 Open Problems	342
11 Online Max-Sat and Submodular Maximization	343
11.1 The Max-Sat Problem and Online Input Models	343
11.2 From Naive Randomization for Max-Sat to Johnson	345
11.2.1 Naive Randomized Algorithm	345
11.2.2 De-randomization by the Method of Conditional Expectations	345
11.2.3 A Previous Algorithm Rediscovered	346
11.3 A Randomized Max-Sat Algorithm with Competitive Ratio $\frac{3}{4}$	349
11.4 The Unconstrained Submodular Maximization Problem	355
11.5 The Natural Randomization of the Double-Sided Greedy Algorithm	358
11.6 Max-Cut and Max-DiCut	359
11.7 Historical Notes and References	360
11.8 Exercises	361
11.9 Open Problems	361
12 Stochastic Inputs	363
12.1 The Random Order Arrival Model and the Secretary Problem	364
12.1.1 The Secretary Problem	365
12.1.2 The Ranking Algorithm in the ROM Model	368
12.2 I.I.D. Inputs	369
12.2.1 Bipartite Matching in the I.I.D. Input Model	371
12.3 Prophet Inequalities and Prophet Secretaries	378
12.3.1 The Prophet Secretary Problem	380
12.4 Online and Random Order Contention Resolution Schemes	384
12.5 Multi-Item Secretaries and Prophets	385
12.5.1 The Multi-Unit Secretary Problem	386
12.5.2 Edge Weighted Matching in the ROM Model	387
12.5.3 The Matroid Secretary Problem	388
12.5.4 Knapsack Secretary and GAP Secretary	389
12.5.5 Matching in General Graphs	390
12.6 Stochastic Probing; The Query Commit Model	390
12.6.1 Stochastic Rewards: Unknown Stochastic Graphs	392
12.6.2 Stochastic Rewards: Known Stochastic Graphs and Known Type Graphs	395
12.7 The Online Pandora's Box Problem; The Price of Information Model	395
12.8 Covering problems and the Random Order Model	396
12.8.1 Facility Location	396
12.8.2 Set Cover	399
12.8.3 Bin Packing	399
12.8.4 Makespan	399
12.8.5 Steiner Tree	400
12.9 Markov Process Arrivals	401
12.9.1 Markov Decision Theory and Optimal Paging	402

12.9.2 The Commute Algorithm	403
12.9.3 Analysis of the Algorithm	405
12.10 Poisson Arrivals	406
12.10.1 Preliminaries	407
12.10.2 The Regime of $c = o(1)$	408
12.10.3 The Regime of Constant c	409
12.10.4 The Regime of $c = \omega(1)$	413
12.10.5 Putting it together	414
12.11 Historical Notes and References	415
12.12 Exercises	419
12.13 Open Problems	419
13 Online Convex Optimization for Online Decision Making	421
13.1 Introduction	421
13.2 Mathematical Preliminaries: Calculus, Convexity, Normal Cones	425
13.2.1 Calculus	425
13.2.2 Duality	427
13.2.3 Convexity	428
13.2.4 Normal Cones	429
13.3 The Main Mathematical Tool	430
13.3.1 A Geometric View	430
13.3.2 Convex Optimization View	432
13.3.3 Connection Between Two Views	437
13.3.4 Two Useful Inequalities	437
13.4 Fractional MTS Preliminaries	439
13.5 Fractional MTS on a Weighted Star Metric	440
13.6 Fractional MTS on Trees	445
13.7 Fractional Weighted Paging	447
13.8 k -Server on HSTs	450
13.9 Rounding of Fractional Solutions to Integral Solutions	452
13.9.1 Randomized Rounding for MTS	452
13.9.2 Randomized Rounding for Weighted Paging	454
13.9.3 Randomized Rounding for k -Server	457
13.10 Historical Notes and References	457
13.11 Exercises	458
14 Advice Model	459
14.1 Different Advice Models	459
14.2 Upper Bound Techniques and Examples	461
14.2.1 Now-or-Later	461
14.2.2 Follow OPT	462
14.2.3 Adapting Randomized Algorithms	463
14.2.4 Adapting Offline Algorithms	463
14.2.5 Combinatorial Designs	465
14.3 Lower Bound Techniques and Examples	467
14.3.1 Pigeonhole Argument	467
14.3.2 String Guessing and Reductions	469
14.3.3 Σ - and $\vee$ -Repeatable Problems	471

14.4 Advice vs. Randomness	473
14.4.1 A Sharp Advice Threshold for the Knapsack Problem	475
14.5 Advice Complexity Classes	476
14.6 Untrusted Advice and Online Algorithms with Predictions	478
14.6.1 Ski Rental	479
14.6.2 Paging	481
14.6.3 Makespan for the Restricted Machines Model	481
14.6.4 Bin Packing	483
14.6.5 Time Series Search	484
14.6.6 Bipartite Matching	485
14.6.7 Secretary Problems	485
14.7 Historical Notes and References	485
14.8 Exercises	487
15 Real-Time Algorithms	489
15.1 Real Time Scheduling	489
15.2 Minimizing Average Completion Time with and without Preemption	491
15.3 The Throughput Maximization Problem with Preemption	493
15.3.1 Interval Scheduling with Real-Time Arrivals	494
15.3.2 Unweighted and Weighted Throughput Scheduling	497
15.3.3 Preemption with Restarts : Throughput Revisited	499
15.4 Online with Buffers and the QoS Throughput Problem	503
15.4.1 The QoS Problem with Unbounded Span using an Unbounded Buffer.	504
15.4.2 FIFO Buffers and the QoS Problem for Uniform s Bounded Span	508
15.5 Other Online Applications using a Reorderable Buffer	509
15.5.1 Online Makespan for Identical Machines	510
15.5.2 RBM for Paging	511
15.5.3 RBM for Minimizing Switching Costs	511
15.6 Metric Matching with Delays	512
15.7 Historical Notes and References	514
15.8 Exercises	517
15.9 Open Problems	518
16 Priority Model	519
16.1 The Priority Model as a Model for Greedy and Myopic Algorithms	520
16.2 Matroids	522
16.3 Priority Algorithms for Some Other Maximization Problems	523
16.3.1 Interval Scheduling	524
16.3.2 Throughput Scheduling and the Job Interval Scheduling Problem	527
16.3.3 The General Knapsack problem	529
16.3.4 Restrictions on Priority Algorithms	529
16.3.5 Weighted Set Packing and Beating the Natural Greedy Algorithm	530
16.3.6 Subset Sum	532
16.3.7 Maximum Matching in Graphs of Maximum Degree 3	535
16.4 Priority Algorithms for Some Minimization Problems	540
16.4.1 Average Completion Time on One Machine.	540
16.4.2 Makespan	542
16.4.3 Unweighted Set Cover	543

16.4.4 Vertex Cover	545
16.5 Priority Algorithms with Revocable Decisions	549
16.6 Priority Algorithms using a Stack.	551
16.7 Fixed Priority Algorithms with Advice	552
16.7.1 Motivating Example	552
16.7.2 Template for Proving Lower Bounds	555
16.7.3 Examples of the Application of the Template	558
16.8 Historical Notes and References	559
16.9 Exercises	561
16.10 Open Problems	561
17 Other Online and Myopic Models	563
17.1 Incorporating Memory: Streaming Algorithms	564
17.1.1 Missing Items	564
17.1.2 Frequent Items	565
17.1.3 Exact Deterministic Solutions vs. Approximate Randomized Solutions	567
17.1.4 Various Streaming Models	567
17.1.5 Sketching Technique	569
17.1.6 Estimating the 2 nd Frequency Moment	570
17.1.7 Estimating the Number of Distinct Elements in a Stream	573
17.1.8 Lower Bounds via Reductions	573
17.1.9 Semi-streaming	573
17.2 Incorporating Time: Dynamic Algorithms	573
17.2.1 Definition and Motivation of the Model	574
17.2.2 Warmup: Decremental Setting for Single-Source Unweighted Shortest Path	575
17.2.3 Maintaining Connected Components	580
17.3 Revocable Acceptances without Penalty	589
17.3.1 Interval Selection with Any Time Arrivals and Call Control Revisited	589
17.3.2 Proportional and Convex Knapsack	595
17.3.3 The General Knapsack Problem	597
17.4 Revocable Acceptances with a Cost: The Buyback Problem	598
17.5 The Recourse(k) Model	601
17.5.1 Applying the AMP Model for Graph Problems	602
17.5.2 Contrasting the Recourse(k) Model with Other Models	602
17.6 Online Algorithms with More General Recourse	602
17.6.1 Bin Packing with Bounded Recourse	603
17.6.2 Min Cost Perfect Matching	604
17.7 Multi-pass Deterministic Online Algorithms	604
17.7.1 A Multi-pass Algorithm for Unweighted Bipartite Matching	604
17.7.2 A 2-pass Algorithm for Weighted Max-Sat	605
17.8 Parallel Online Streams	606
17.9 Historical Notes and References	606
17.10 Exercises	609
17.11 Open Problems	610

18 Alternatives to Competitive Analysis	611
18.1 Resource Augmentation	612
18.2 Loose Competitiveness	613
18.3 Locality of Reference	614
18.4 Bijective Analysis	616
18.5 Relative Worst Order Ratio	617
18.6 Historical Notes and References	618
18.7 Exercises	618
Appendix A Notational Index	621
Appendix B Probability Theory	623
B.1 Probability Space, Events, and Random Variables	623
B.2 Expected Value, Independence, and Conditioning	625
B.3 Variance and Basic Inequalities in Probability Theory	626
B.4 Martingales and Azuma-Hoeffding Inequality	627
B.5 Exercises	629
Appendix C Common Mathematical Inequalities	631
Bibliography	633
Alphabetical Index	663
