

Online and Other Myopic Algorithms

Volume 1

Allan Borodin and Denis Pankratov

Contents

<i>Preface</i>	vi
1 Introduction	1
1.1 What is this Book About?	1
1.2 Motivation	3
1.3 Brief History of Online Algorithms	4
1.4 Motivating Example 1: Ski Rental	4
1.5 Motivating Example 2: Line Search Problem	8
1.6 Motivating Example 3: Paging	11
1.7 Historical Notes and References	13
Exercises	14
2 Deterministic Online Algorithms	18
2.1 Request-Answer Games	18
2.2 Competitive Ratio for Minimization Problems	19
2.3 Minimization Problem Example: Makespan	21
2.4 Minimization Problem Example: Bin Packing	25
2.5 Competitive Ratio for Maximization Problems	38
2.6 Maximization Problem Example: Time Series Search	39
2.7 Maximization Problem Example: One-Way Trading	41
2.8 Temporary Input Items	44
2.9 Historical Notes and References	44
Exercises	47
Open Problems	49
3 Randomized Online Algorithms	50
3.1 Randomized Online Algorithm Template	50
3.2 Types of Adversaries	52
3.3 Relationships between Adversaries	54
3.4 How Much Can Randomness Help?	57
3.5 De-randomization	62
3.6 A Randomized Algorithm for Paging	63
3.7 A Randomized Lower Bound for Paging	65
3.8 Yao's Minimax Principle	67
3.9 Yao's Minimax Principle Example: Lower Bound for Ski Rental	68
3.10 The General Knapsack Problem	70
3.11 Optimality of Time Series and One-Way Trading Algorithms	74

3.12	Obtaining Randomized Competitive Ratios with Constant or High Probability	76
3.13	Bounded Memory and Memoryless Online Algorithms	77
3.14	Historical Notes and References	78
	Exercises	80
	Open Problems	81
4	Some Classical Problems	82
4.1	Potential Function Method Primer	82
4.2	List Accessing Problem	86
4.3	Load Balancing	94
4.4	Call Control (Throughput Maximization) in Circuit Routing	102
4.5	Online Steiner Tree Problem	113
4.6	Historical Notes and References	117
	Exercises	119
	Open Problems	122
5	k-Server, Metrical Task Systems, and Other Metric Problems	123
5.1	Metric Spaces	123
5.2	The k -Server Problem	124
5.3	Metrical Task Systems	143
5.4	Metrical Service Systems and Layered Graph Traversal	146
5.5	Hierarchically Well Separated Trees	151
5.6	Upper Bounds for the Randomized k -Server and MTS Problems	154
5.7	Lower Bounds for the Randomized k -Server and MTS Problems	156
5.8	Metric Facility Location	160
5.9	Historical Notes and References	167
	Exercises	170
	Open Problems	172
6	Online Learning, Regret and the Relation to Competitive Analysis	173
6.1	Learning Experts: The Full Information Setting	173
6.2	Multi-Armed Bandit (MAB) Problems	181
6.3	Unifying Results for Competitive Analysis and Regret Minimization	186
6.4	Historical Notes and References	193
	Exercises	194
	Open Problems	195
7	Graph Problems	196
7.1	Input Models for General Graphs	197
7.2	Special Input Model for Bipartite Graphs	199
7.3	Vertex Cover	200
7.4	Hard Online Graph Problems	206
7.5	Bipartite Maximum Matching	214
7.6	Weighted Bipartite Matching	219
7.7	Min Cost Perfect (Metric) Matching	224
7.8	Graph Coloring	240
7.9	Historical Notes and References	250
	Exercises	253

Open Problems	257
8 Extensions of Classical Problems	258
8.1 Ski Rental Extensions	258
8.2 Bin Packing Extensions	273
8.3 k -Server Extensions	291
8.4 Historical Notes and References	307
Exercises	312
Open Problems	312
9 Online Mechanism Design	313
9.1 Online Fair Division	313
9.2 Fairness in Voting	335
9.3 Online Mechanism Design	346
9.4 Decentralized Mechanisms: Pricing Online Decisions	352
9.5 Some Concluding Remarks about Online Mechanism Design, Voting and Social Choice.	358
9.6 Historical Notes and References	359
Exercises	361
Open Problems	362
10 Online Max-Sat and Submodular Maximization	363
10.1 The Max-Sat Problem and Online Input Models	363
10.2 From Naive Randomization for Max-Sat to Johnson	365
10.3 A Randomized Max-Sat Algorithm with Competitive Ratio $\frac{3}{4}$	370
10.4 The Unconstrained Submodular Maximization Problem	375
10.5 The Natural Randomization of the Double-Sided Greedy Algorithm	379
10.6 Max-Cut and Max-DiCut	380
10.7 Historical Notes and References	381
Exercises	382
Open Problems	382
Appendix A Notational Index	383
Appendix B Probability Theory	385
<i>Bibliography</i>	394
<i>Algorithm index</i>	407
<i>Subject index</i>	408
