Lecture 12: Modelling Enterprises

- ⇒ **Modeling business processes**
 - ↳ Why business processes?
 - ↳ Modelling concurrency and synchronization in business activities
 - ↳ UML Activity Diagrams
- ⇒ **Modelling organisational intent**
 - ↳ i* modelling language
 - ↳ Modelling agents and the strategic dependencies between them
 - ↳ Explaining these dependencies in terms of agents' goals

Business Processes

- ⇒ **Business Process Automation**
 - ↳ Leave existing business processes as they are
 - Look for opportunities to automate parts of the process
 - ↳ Can make an organisation more efficient; has least impact on the business
- ⇒ **Business Process Improvement**
 - ↳ Make moderate changes to the way the organisation operates
 - ↳ E.g. improve efficiency and/or effectiveness of existing process
 - Techniques: Duration analysis; activity-based costing; benchmarking
- ⇒ **Business Process Reengineering**
 - ↳ Fundamental change to the way the organisation operates
 - ↳ Techniques:
 - Outcome analysis - focus on the real outcome from the customer's perspective
 - Technology analysis - look for opportunities to exploit new technology
 - Activity elimination - consider each activity in turn as a candidate for elimination

Modelling Business Processes

- ⇒ **Business processes involve:**
 - ↳ Multiple actors (people, business units,...)
 - ↳ Concurrent activities
 - ↳ Explicit synchronization points
 - E.g. some task cannot start until several other concurrent tasks are complete
 - ↳ End-to-end flow of activities
- ⇒ **Choice of modelling language:**
 - ↳ UML Activity diagrams
 - ...based on flowcharts and petri nets
 - Not really object oriented (poor fit with the rest of UML)
 - ↳ Business Process Modelling Notation (BPMN)
 - New (emerging) standard, loosely based on pi calculus

Refresher: Petri Nets

- ⇒ **Petri net syntax:**
 - ↳ Places and transitions
 - ↳ Tokens (possibly coloured)

Summary

- ⇒ Need to understand business processes
 - ↳ Existing business process
 - > to understand the problem
 - ↳ Potential changes to the business process
 - > To investigate alternative solutions
- ⇒ Need to understand organisational interdependencies
 - ↳ How people depend on one another to achieve their goals
 - ↳ How goals relate to tasks
