- General case

#### Parallel stereo cameras:

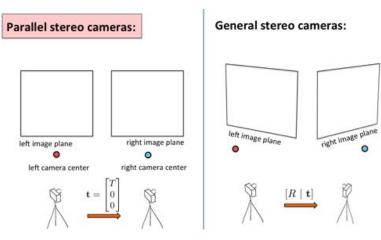

#### General stereo cameras:

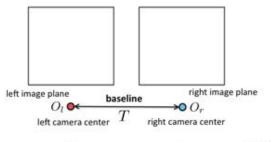

### Stereo

#### **Epipolar geometry**

- Case with two cameras with parallel optical axes ← First this
- General case

 We assume that the two calibrated cameras (we know intrinsics and extrinsics) are parallel, i.e. the right camera is just some distance to the right of left camera. We assume we know this distance. We call it the baseline.

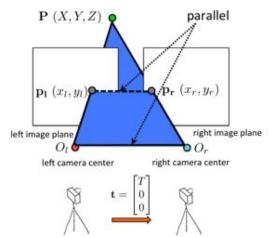

The right camera is shifted to the right in X direction

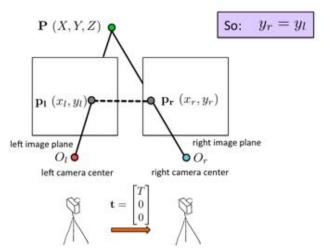

• Pick a point P in the world

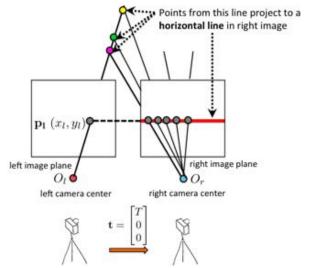

• Points  $O_I$ ,  $O_r$  and P (and  $p_I$  and  $p_r$ ) lie on a plane. Since two image planes lie on the same plane (distance f from each camera), the lines  $O_IO_r$  and  $p_Ip_r$  are parallel.

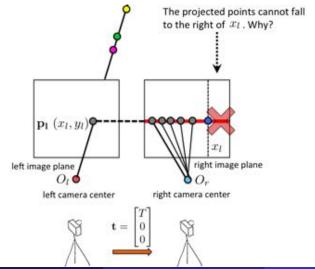

• Since lines  $O_lO_r$  and  $p_lp_r$  are parallel, and  $O_l$  and  $O_r$  have the same y, then also  $p_l$  and  $p_r$  have the same y:  $y_r = y_l$ !

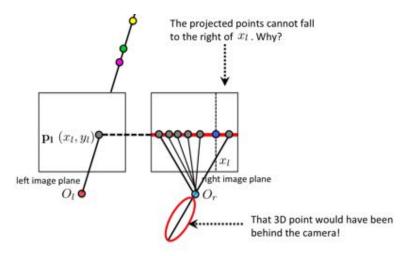

• So all points on the projective line  $O_1p_1$  project to a horizontal line with  $y = y_1$  on the right image. This is nice, let's remember this.

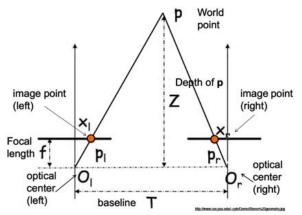

• Another observation: No point from  $O_l p_l$  can project to the right of  $x_l$  in the right image. Why?

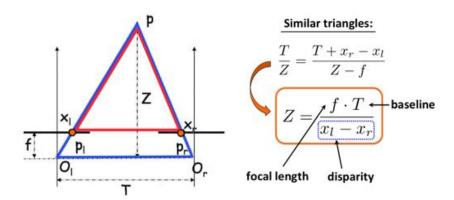

Because that would mean our image can see behind the camera...

• Since our points  $\mathbf{p_l}$  and  $\mathbf{p_r}$  lie on a horizontal line, we can forget about  $y_l$  for a moment (it doesn't seem important). Let's look at the camera situation from the birdseye perspective instead. Let's see if we can find a connection between  $x_l$ ,  $x_r$  and Z (because Z is what we want).

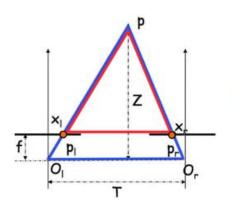

We can then use similar triangles to compute the depth of the point P

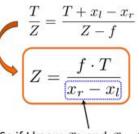

[Adopted from: J. Hays]

• We can then use similar triangles to compute the depth of the point P

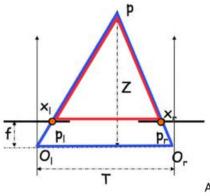

#### Similar triangles:

So if I know  $x_l$  and  $x_r$  , then I can compute Z!

ullet We can then use similar triangles to compute the depth of the point P

#### Similar triangles:

$$\frac{T}{Z} = \frac{T + x_l - x}{Z - f}$$

$$Z = \frac{f \cdot T}{x_r - x_l}$$

$$x = \frac{f \cdot X}{Z} + p_x$$

And if I know Z, I can compute X and Y, which gives me the point in 3D

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ?

left image

right image

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ? By matching on line  $y_r = y_l$ .

left image

right image

the match will be on this line (same y)

(CAREFUL: this is only true for parallel cameras. Generally, line not horizontal)

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ? By matching on line  $y_r = y_l$ .

### We are looking for this point

left image

right image

the match will be on the left of  $x_l$ how do I find it?

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ? By matching. Patch around  $(x_r, y_r)$ ) should look similar to the patch around  $(x_l, y_l)$ .

#### We call this line a scanline

left image

right image

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ? By matching. Patch around  $(x_r, y_r)$ ) should look similar to the patch around  $(x_l, y_l)$ .

#### How similar?

left image

right image

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ? By matching. Patch around  $(x_r, y_r)$ ) should look similar to the patch around  $(x_l, y_l)$ .

#### How similar?

left image

right image

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ? By matching. Patch around  $(x_r, y_r)$ ) should look similar to the patch around  $(x_l, y_l)$ .

#### Most similar. A match!

left image

right image

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ? By matching. Patch around  $(x_r, y_r)$ ) should look similar to the patch around  $(x_l, y_l)$ .

left image

At each point on the scanline: Compute a matching cost

Matching cost: SSD or normalized correlation

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ? By matching. Patch around  $(x_r, y_r)$ ) should look similar to the patch around  $(x_l, y_l)$ .

$$SSD(\text{patch}_l, \text{patch}_r) = \sum_{x} \sum_{y} (I_{\text{patch}_l}(x, y) - I_{\text{patch}_r}(x, y))^2$$

SSD

left image

Compute a matching cost

Matching cost: SSD (look for minima)

disparity

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ? By matching. Patch around  $(x_r, y_r)$ ) should look similar to the patch around  $(x_l, y_l)$ .

$$NC(\text{patch}_l, \text{patch}_r) = \frac{\sum_x \sum_y (I_{\text{patch}_l}(x, y) \cdot I_{\text{patch}_r}(x, y))}{||I_{\text{patch}_l}|| \cdot ||I_{\text{patch}_r}||}$$

left image

Norm Corr.

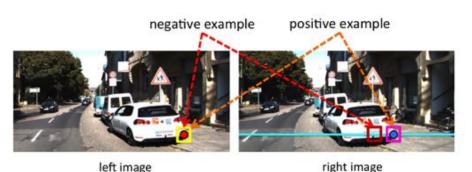

disparity

Compute a matching cost

Matching cost: Normalized Corr. (look for maxima)

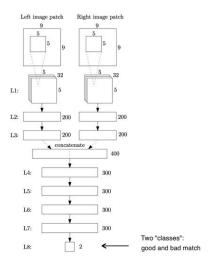

• Version'2015: Can I do this task even better?

• Version'2015: Train a classifier! How can I get ground-truth?

Training examples: get positive and negative matches

Version'2015: Train a Neural Network classifier!

 $[J.\ Zbontar\ and\ Y.\ LeCun:\ Computing\ the\ Stereo\ Matching\ Cost\ with\ a\ Convolutional\ Neural$ 

- Version'2015: Train a Neural Network classifier!
- To get the most amazing performance

Figure: Performance on KITTI (metrics is error, so lower is better)

• For each point  $\mathbf{p_l} = (x_l, y_l)$ , how do I get  $\mathbf{p_r} = (x_r, y_r)$ ? By matching. Patch around  $(x_r, y_r)$ ) should look similar to the patch around  $(x_l, y_l)$ .

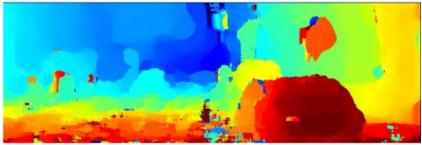

left image

Do this for all the points in the left image!

• We get a disparity map as a result

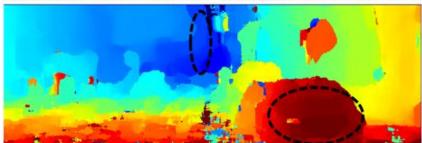

Result: Disparity map

• We get a disparity map as a result

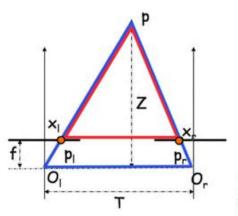

Things that are closer have **larger disparity** than those that are far away from camera. Why?

Depth and disparity are inversely proportional

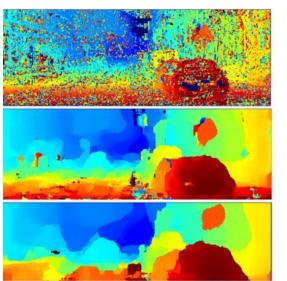

### Similar triangles:

$$Z = \frac{T + x_l - x_r}{Z - f}$$

$$Z = \frac{f \cdot T}{[x_r - x_l]}$$

Depth (Z) and disparity are inversely proportional

• Smaller patches: more detail, but noisy. Bigger: less detail, but smooth

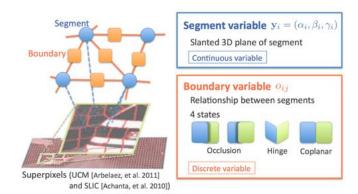

patch size = 5

patch size = 35

patch size = 85

### You Can Do It Much Better...

• With Energy Minimization on top, e.g., a Markov Random Field (MRF)
