# Matching Planar Objects In New Viewpoints ... And Much More – via Homography

#### What Transformation Happened To My DVD?

• Rectangle goes to a parallelogram

#### Affine Transformations

Affine transformations are combinations of:

- Linear transformations, and
- Translations

$$\begin{bmatrix} x' \\ y' \end{bmatrix} = \begin{bmatrix} a & b & e \\ c & d & f \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

Properties of affine transformations:

- Origin does not necessarily map to origin
- Lines map to lines
- Parallel lines remain parallel
- Ratios are preserved
- Closed under composition
- Rectangles go to parallelograms
- [Source: N. Snavely, slide credit: R. Urtasun]

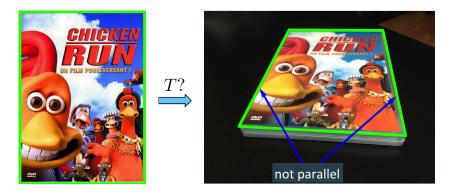

#### What Transformation Really Happened To My DVD?

• What about now?

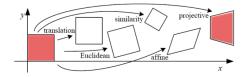

#### What Transformation Really Happened To My DVD?

• Actually a rectangle goes to quadrilateral

#### 2D Image Transformations

Transformation	Matrix	# DoF	Preserves	Icon
translation	$\left[ egin{array}{c c} I & t \end{array}  ight]_{2  imes 3}$	2	orientation	
rigid (Euclidean)	$\left[ egin{array}{c c} R & t \end{array}  ight]_{2  imes 3}$	3	lengths	$\Diamond$
similarity	$\left[ \begin{array}{c c} s m{R} & t \end{array}  ight]_{2  imes 3}$	4	angles	$\diamond$
affine	$\left[ egin{array}{c} A \end{array}  ight]_{2 imes 3}$	6	parallelism	$\square$
projective	$\left[ egin{array}{c}  ilde{m{H}} \end{array}  ight]_{3 imes 3}$	8	straight lines	

- These transformations are a nested set of groups
- Closed under composition and inverse is a member

Sanja Fidler

[source: R. Szeliski]

#### **Projective Transformations**

• Homography:

$$w \begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{bmatrix} a & b & c \\ d & e & f \\ g & h & i \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

Properties:

- Origin does not necessarily map to origin
- Lines map to lines
- Parallel lines do not necessarily remain parallel
- Ratios are **not** preserved
- Closed under composition
- Rectangle goes to quadrilateral
- Affine transformation is a special case, where g = h = 0 and i = 1

[Source: N. Snavely, slide credit: R. Urtasun]

### What Transformation Really Happened to My DVD?

For **planar** objects:

- Viewpoint change for planar objects is a homography
- Affine transformation approximates viewpoint change for planar objects that are far away from camera

#### What Transformation Happened to My DVD?

- Why should I care about homography?
- Now that I care, how should I estimate it?
- I want to understand the geometry behind homography. That is, why aren't parallel lines mapped to parallel lines in oblique viewpoints? How did we get that equation for computing the homography?

- Why should I care about homography? Let's answer this first
- Now that I care, how should I estimate it?
- I want to understand the geometry behind homography. That is, why aren't parallel lines mapped to parallel lines in oblique viewpoints? How did we get that equation for computing the homography?

- Why do we need homography? Can't we just assume that the transformation is affine? The approximation on the right looks pretty decent to me...
- That's right. If I want to detect (match) an object in a new viewpoint, an affine transformation is a relatively decent approximation

- Why do we need homography? Can't we just assume that the transformation is affine? The approximation on the right looks pretty decent to me...
- That's right. If I want to detect (match) an object in a new viewpoint, an affine transformation is a relatively decent approximation
- But for some applications I want to be more accurate. Which?

- Why do we need homography? Can't we just assume that the transformation is affine? The approximation on the right looks pretty decent to me...
- That's right. If I want to detect (match) an object in a new viewpoint, an affine transformation is a relatively decent approximation
- But for some applications I want to be more accurate. Which?

• Tom Cruise is taking an exam on Monday

#### exam is here

• The professor keeps the exams in this office

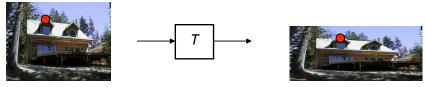

• He enters (without permission) and takes a picture of the laptop screen

- His picture turns out to not be from a viewpoint he was shooting for (it's difficult to take pictures while hanging)
- Can he still read the exam?

### Warping an Image with a Global Transformation

**p** = (x,y)

**p'** = (x',y')

• Transformation T is a coordinate-changing machine:

$$[x',y']=T(x,y)$$

- What does it mean that T is global?
  - Is the same for any point p
  - Can be described by just a few numbers (parameters)

[Source: N. Snavely, slide credit: R. Urtasun]

#### Warping an Image with a Global Transformation

• Example of warping for different transformations:

translation

```
rotation
```

```
aspect
```

#### perspective

#### affine

#### Forward and Inverse Warping

• Forward Warping: Send each pixel f(x) to its corresponding location (x', y') = T(x, y) in g(x', y')

**procedure** *forwardWarp*(*f*, *h*, **out** *g*):

For every pixel x in f(x)

- 1. Compute the destination location x' = h(x).
- 2. Copy the pixel f(x) to g(x').

#### • Inverse Warping: Each pixel at destination is sampled from original image

**procedure** inverseWarp(f, h, out g):

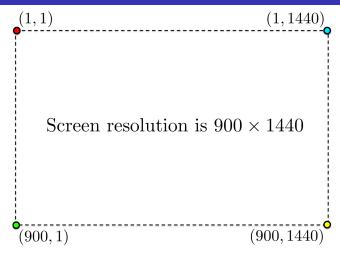

For every pixel x' in g(x')

- 1. Compute the source location  $x = \hat{h}(x')$
- 2. Resample f(x) at location x and copy to g(x')

#### [source: R. Urtasun]

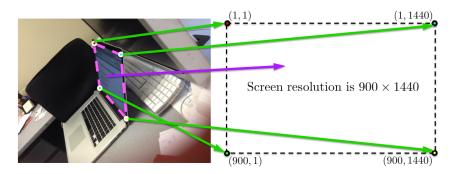

• We want to transform the picture (plane) inside these 4 points into a rectangle (laptop screen)

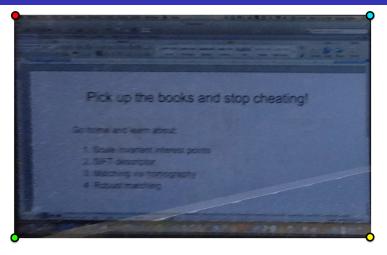

• We want it to look like this. How can we do this?

 A transformation that maps a projective plane (a quadrilateral) to another projective plane (another quadrilateral, in this case a rectangle) is a homography

# homography H

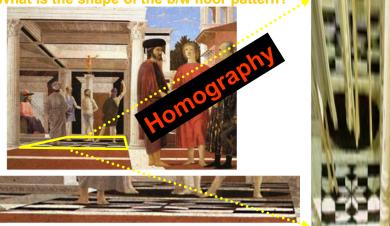

• If we compute the homography and warp the image according to it, we get this

• If we used affine transformation instead, we'd get this. Would be even worse if our picture was taken closer to the laptop

#### What is the shape of the b/w floor pattern?

Slide from Criminisi

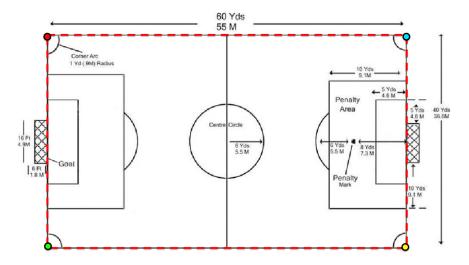

• How many meters did this player run?

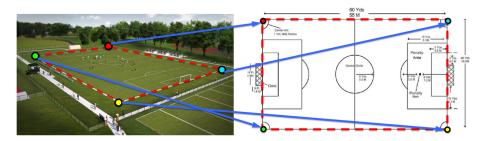

• Field is planar. We know its dimensions (look on Wikipedia).

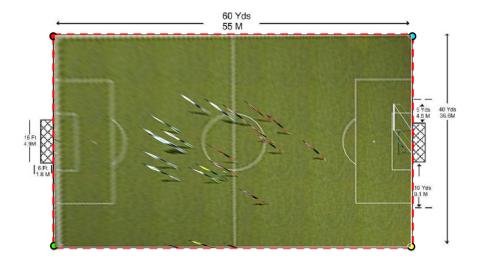

#### • Let's take the 4 corner points of the field

• We need to compute a homography that maps them to these 4 corners

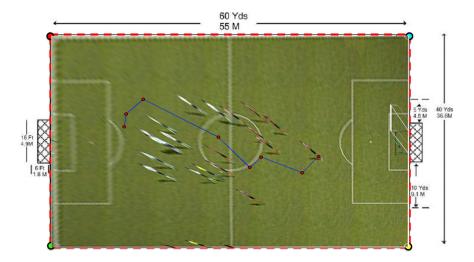

• We need to compute a homography that maps the 4 corners. Any other point from this plane (the field) also maps to the right with the same homography

• Nice. What happened to the players?

### Application 2: How Much do Soccer Players Run?

 $\bullet$  We can now also transform the player's trajectory  $\rightarrow$  and we have it in meters!

### Application 2: How Much do Soccer Players Run?

• If we used affine transformation... Our estimations of running would not be accurate!

### Application 3: Panorama Stitching

## Take a tripod, rotate camera and take pictures

[Source: Fernando Flores-Mangas]

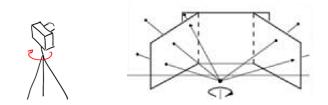

### Application 3: Panorama Stitching

[Source: Fernando Flores-Mangas]

### Application 3: Panorama Stitching

• Each pair of images is related by homography! If we also moved the camera, this wouldn't be true (next class) [Source: Fernando Flores-Mangas]

Sanja Fidler

CSC420: Intro to Image Understanding

- To do panorama stitching, we need to:
  - Match points between pairs of images I and J
  - Compute a transformation between the between matches in I and J : a homography
  - Do it robustly (RANSAC)
  - Warp the first image to the second using the estimated homography
- Apart from the last point, this is exactly the same procedure as for the problem of matching planar objects across viewpoints
- So this should motivate the why do I care part of the homographies

### Homography

- Why should I care about homography?
- Now that I care, how should I estimate it? Let's do this now
- I want to understand the geometry behind homography. That is, why aren't parallel lines mapped to parallel lines in oblique viewpoints? How did we get that equation for computing the homography?

- Let  $(x_i, y_i)$  be a point on the reference (model) image, and  $(x'_i, y'_i)$  its match in the test image
- A homography H maps  $(x_i, y_i)$  to  $(x'_i, y'_i)$ :

$$\begin{bmatrix} ax'_i \\ ay'_i \\ a \end{bmatrix} = \begin{bmatrix} h_{00} & h_{01} & h_{02} \\ h_{10} & h_{11} & h_{12} \\ h_{20} & h_{21} & h_{22} \end{bmatrix} \begin{bmatrix} x_i \\ y_i \\ 1 \end{bmatrix}$$

- Let  $(x_i, y_i)$  be a point on the reference (model) image, and  $(x'_i, y'_i)$  its match in the test image
- A homography H maps  $(x_i, y_i)$  to  $(x'_i, y'_i)$ :

$$\begin{bmatrix} ax'_i \\ ay'_i \\ a \end{bmatrix} = \begin{bmatrix} h_{00} & h_{01} & h_{02} \\ h_{10} & h_{11} & h_{12} \\ h_{20} & h_{21} & h_{22} \end{bmatrix} \begin{bmatrix} x_i \\ y_i \\ 1 \end{bmatrix}$$

• We can get rid of that a on the left:

$$\begin{aligned} x'_i &= \frac{h_{00}x_i + h_{01}y_i + h_{02}}{h_{20}x_i + h_{21}y_i + h_{22}} \\ y'_i &= \frac{h_{10}x_i + h_{11}y_i + h_{12}}{h_{20}x_i + h_{21}y_i + h_{22}} \end{aligned}$$

- Let  $(x_i, y_i)$  be a point on the reference (model) image, and  $(x'_i, y'_i)$  its match in the test image
- A homography H maps  $(x_i, y_i)$  to  $(x'_i, y'_i)$ :

$$\begin{bmatrix} ax'_i \\ ay'_i \\ a \end{bmatrix} = \begin{bmatrix} h_{00} & h_{01} & h_{02} \\ h_{10} & h_{11} & h_{12} \\ h_{20} & h_{21} & h_{22} \end{bmatrix} \begin{bmatrix} x_i \\ y_i \\ 1 \end{bmatrix}$$

• We can get rid of that a on the left:

$$\begin{aligned} x'_i &= \frac{h_{00}x_i + h_{01}y_i + h_{02}}{h_{20}x_i + h_{21}y_i + h_{22}} \\ y'_i &= \frac{h_{10}x_i + h_{11}y_i + h_{12}}{h_{20}x_i + h_{21}y_i + h_{22}} \end{aligned}$$

• Hmmmm... Can I still rewrite this into a linear system in *h*? [Source: R. Urtasun]

• From:

$$\begin{aligned} x'_i &= \frac{h_{00}x_i + h_{01}y_i + h_{02}}{h_{20}x_i + h_{21}y_i + h_{22}} \\ y'_i &= \frac{h_{10}x_i + h_{11}y_i + h_{12}}{h_{20}x_i + h_{21}y_i + h_{22}} \end{aligned}$$

• We can easily get this:

$$\begin{aligned} x_i' \left( h_{20} x_i + h_{21} y_i + h_{22} \right) &= h_{00} x_i + h_{01} y_i + h_{02} \\ y_i' \left( h_{20} x_i + h_{21} y_i + h_{22} \right) &= h_{10} x_i + h_{11} y_i + h_{12} \end{aligned}$$

• Rewriting it a little:

$$\begin{aligned} h_{00}x_i + h_{01}y_i + h_{02} - x_i' \left( h_{20}x_i + h_{21}y_i + h_{22} \right) &= 0 \\ h_{10}x_i + h_{11}y_i + h_{12} - y_i' \left( h_{20}x_i + h_{21}y_i + h_{22} \right) &= 0 \end{aligned}$$

• We can re-write these equations:

$$\begin{aligned} h_{00}x_i + h_{01}y_i + h_{02} - x_i' \left( h_{20}x_i - h_{21}y_i - h_{22} \right) &= 0 \\ h_{10}x_i + h_{11}y_i + h_{12} - y_i' \left( h_{20}x_i - h_{21}y_i - h_{22} \right) &= 0 \end{aligned}$$

• as a linear system!

$$\begin{bmatrix} x_i & y_i & 1 & 0 & 0 & 0 & -x'_i x_i & -x'_i y_i & -x'_i \\ 0 & 0 & 0 & x_i & y_i & 1 & -y'_i x_i & -y'_i y_i & -y'_i \end{bmatrix} \begin{bmatrix} h_{00} \\ h_{01} \\ h_{02} \\ h_{10} \\ h_{11} \\ h_{12} \\ h_{20} \\ h_{21} \\ h_{22} \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

[Source: R. Urtasun]

• Taking all our matches into account:

$$\begin{bmatrix} x_{1} & y_{1} & 1 & 0 & 0 & 0 & -x'_{1}x_{1} & -x'_{1}y_{1} & -x'_{1}\\ 0 & 0 & 0 & x_{1} & y_{1} & 1 & -y'_{1}x_{1} & -y'_{1}y_{1} & -y'_{1}\\ \vdots \\ x_{n} & y_{n} & 1 & 0 & 0 & 0 & -x'_{n}x_{n} & -x'_{n}y_{n} & -x'_{n}\\ 0 & 0 & 0 & x_{n} & y_{n} & 1 & -y'_{n}x_{n} & -y'_{n}y_{n} & -y'_{n} \end{bmatrix} \begin{bmatrix} n_{00} \\ h_{00} \\ h_{11} \\ h_{12} \\ h_{20} \\ h_{21} \\ h_{22} \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ \vdots \\ h_{22} \\ h_{22} \\ h_{22} \end{bmatrix}$$

• Taking all our matches into account:

$$\begin{bmatrix} x_{1} & y_{1} & 1 & 0 & 0 & 0 & -x_{1}'x_{1} & -x_{1}'y_{1} & -x_{1}'\\ 0 & 0 & 0 & x_{1} & y_{1} & 1 & -y_{1}'x_{1} & -y_{1}'y_{1} & -y_{1}'\\ x_{n} & y_{n} & 1 & 0 & 0 & 0 & -x_{n}'x_{n} & -x_{n}'y_{n} & -x_{n}'\\ 0 & 0 & 0 & x_{n} & y_{n} & 1 & -y_{n}'x_{n} & -y_{n}'y_{n} & -y_{n}' \end{bmatrix} \begin{bmatrix} h_{00} \\ h_{01} \\ h_{10} \\ h_{12} \\ h_{20} \\ h_{21} \\ h_{22} \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \\ 0 \\ h_{21} \\ h_{22} \end{bmatrix}$$

- How many matches do I need to estimate H?
- This defines a least squares problem:

 $\min_{\boldsymbol{h}}||\boldsymbol{A}\boldsymbol{h}||_2^2$ 

• Taking all our matches into account:

$$\begin{bmatrix} x_{1} & y_{1} & 1 & 0 & 0 & 0 & -x'_{1}x_{1} & -x'_{1}y_{1} & -x'_{1} \\ 0 & 0 & 0 & x_{1} & y_{1} & 1 & -y'_{1}x_{1} & -y'_{1}y_{1} & -y'_{1} \\ x_{n} & y_{n} & 1 & 0 & 0 & 0 & -x'_{n}x_{n} & -x'_{n}y_{n} & -x'_{n} \\ 0 & 0 & 0 & x_{n} & y_{n} & 1 & -y'_{n}x_{n} & -y'_{n}y_{n} & -y'_{n} \end{bmatrix} \begin{bmatrix} n_{00} \\ h_{00} \\ h_{11} \\ h_{12} \\ h_{20} \\ h_{21} \\ h_{22} \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ \vdots \\ 0 \\ h_{21} \\ h_{22} \end{bmatrix}$$

Г **г** П

- How many matches do I need to estimate H?
- This defines a least squares problem:

# $\min_{\mathbf{h}} ||\mathbf{A}\mathbf{h}||_2^2$

• Since **h** is only defined up to scale, solve for unit vector

• Taking all our matches into account:

$$\begin{bmatrix} x_{1} & y_{1} & 1 & 0 & 0 & 0 & -x'_{1}x_{1} & -x'_{1}y_{1} & -x'_{1} \\ 0 & 0 & 0 & x_{1} & y_{1} & 1 & -y'_{1}x_{1} & -y'_{1}y_{1} & -y'_{1} \\ x_{n} & y_{n} & 1 & 0 & 0 & 0 & -x'_{n}x_{n} & -x'_{n}y_{n} & -x'_{n} \\ 0 & 0 & 0 & x_{n} & y_{n} & 1 & -y'_{n}x_{n} & -y'_{n}y_{n} & -y'_{n} \end{bmatrix} \begin{bmatrix} n_{00} \\ h_{00} \\ h_{11} \\ h_{12} \\ h_{20} \\ h_{21} \\ h_{22} \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ \vdots \\ 0 \\ h_{21} \\ h_{22} \end{bmatrix}$$

Г **г** П

- How many matches do I need to estimate H?
- This defines a least squares problem:

# $\min_{\mathbf{h}} ||\mathbf{A}\mathbf{h}||_2^2$

- Since  $\mathbf{h}$  is only defined up to scale, solve for unit vector
- Solution:  $\hat{\mathbf{h}} =$  eigenvector of  $\mathbf{A}^T \mathbf{A}$  with smallest eigenvalue

• Taking all our matches into account:

$$\begin{bmatrix} x_{1} & y_{1} & 1 & 0 & 0 & 0 & -x_{1}'x_{1} & -x_{1}'y_{1} & -x_{1}'\\ 0 & 0 & 0 & x_{1} & y_{1} & 1 & -y_{1}'x_{1} & -y_{1}'y_{1} & -y_{1}'\\ x_{n} & y_{n} & 1 & 0 & 0 & 0 & -x_{n}'x_{n} & -x_{n}'y_{n} & -x_{n}'\\ 0 & 0 & 0 & x_{n} & y_{n} & 1 & -y_{n}'x_{n} & -y_{n}'y_{n} & -y_{n}' \end{bmatrix} \begin{bmatrix} n_{00} \\ h_{00} \\ h_{11} \\ h_{12} \\ h_{20} \\ h_{21} \\ h_{22} \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ \vdots \\ 0 \\ h_{21} \\ h_{22} \end{bmatrix}$$

- How many matches do I need to estimate H?
- This defines a least squares problem:

# $\min_{\boldsymbol{h}}||\boldsymbol{A}\boldsymbol{h}||_2^2$

- Since  $\mathbf{h}$  is only defined up to scale, solve for unit vector
- Solution:  $\hat{\mathbf{h}} =$  eigenvector of  $\mathbf{A}^T \mathbf{A}$  with smallest eigenvalue
- Works with 4 or more points

### Summary – Stuff You Need To Know

- A homography is a mapping between projective planes
- You need at least 4 correspondences (matches) to compute it

#### Matlab functions:

- TFORM = MAKETFORM('AFFINE',[X1,Y1],[X2,Y2]); % Computes affine transformation between points [x<sub>1</sub>, y<sub>1</sub>] and [x<sub>2</sub>, y<sub>2</sub>]. Needs 3 pairs of matches (x<sub>1</sub>, y<sub>1</sub>, x<sub>2</sub>, y<sub>2</sub> have three rows)
- TFORM = MAKETFORM('PROJECTIVE',[X1,Y1],[X2,Y2]); % Computes homography between points [*x*<sub>1</sub>, *y*<sub>1</sub>] and [*x*<sub>2</sub>, *y*<sub>2</sub>]. Needs 4 pairs of matches
- IMW = IMTRANSFORM(IM, TFORM, 'BICUBIC', 'FILL', 0); % Warps the image according to transformation
