1. For each equivalence below, either provide a derivation from one side of the equivalence to the other (justify each step of your derivation with a brief explanation — for example, by naming one of the equivalences (see over for a list), or show that the equivalence does not hold (warning: you cannot use a derivation to show non-equivalence — instead, think carefully about what an equivalence means, and how you can disprove it).

(a) \((P \Rightarrow R) \land (Q \Rightarrow R) \iff (P \lor Q) \Rightarrow R\)

(b) \(P \Rightarrow (Q \Rightarrow R) \iff (P \Rightarrow Q) \Rightarrow R\)

(c) \(P \Rightarrow (Q \Rightarrow R) \iff (P \Rightarrow Q) \Rightarrow (P \Rightarrow R)\)
Standard Equivalences (where \( P, Q, P(x), Q(x) \), etc. are arbitrary sentences)

- **Commutativity**
  
  \[
  P \land Q \iff Q \land P \\
  P \lor Q \iff Q \lor P \\
  P \iff Q \iff Q \iff P
  \]

- **Associativity**
  
  \[
  P \land (Q \land R) \iff (P \land Q) \land R \\
  P \lor (Q \lor R) \iff (P \lor Q) \lor R
  \]

- **Identity**
  
  \[
  P \land (Q \land \neg Q) \iff P \\
  P \lor (Q \land \neg Q) \iff Q \land \neg Q
  \]

- **Absorption**
  
  \[
  P \land (Q \land \neg Q) \iff Q \land \neg Q \\
  P \lor (Q \land \neg Q) \iff Q \lor \neg Q
  \]

- **Idempotency**
  
  \[
  P \land P \iff P \\
  P \lor P \iff P
  \]

- **Double Negation**
  
  \[
  \neg \neg P \iff P
  \]

- **DeMorgan’s Laws**
  
  \[
  \neg (P \land Q) \iff \neg P \lor \neg Q \\
  \neg (P \lor Q) \iff \neg P \land \neg Q
  \]

- **Distributivity**
  
  \[
  P \land (Q \lor R) \iff (P \land Q) \lor (P \land R) \\
  P \lor (Q \land R) \iff (P \lor Q) \land (P \lor R)
  \]

- **Implication**
  
  \[
  P \Rightarrow Q \iff \neg P \lor Q \\
  P \iff Q \iff (P \Rightarrow Q) \land (Q \Rightarrow P)
  \]

- **Biconditional**
  
  \[
  \forall x, P(x) \iff \forall y, P(y) \\
  \exists x, P(x) \iff \exists y, P(y)
  \]

- **Quantifier Negation**
  
  \[
  \neg \forall x, P(x) \iff \exists x, \neg P(x) \\
  \neg \exists x, P(x) \iff \forall x, \neg P(x)
  \]

- **Quantifier Commutativity**
  
  \[
  \forall x, \forall y, S(x, y) \iff \forall y, \forall x, S(x, y) \\
  \exists x, \exists y, S(x, y) \iff \exists y, \exists x, S(x, y)
  \]

- **Quantifier Distributivity**
  
  \[
  S \land \forall x, Q(x) \iff \forall x, S \land Q(x) \\
  S \lor \forall x, Q(x) \iff \forall x, S \lor Q(x) \\
  S \land \exists x, Q(x) \iff \exists x, S \land Q(x) \\
  S \lor \exists x, Q(x) \iff \exists x, S \lor Q(x)
  \]

2. An “interpretation” for a logical statement consists of a domain \( D \) (any non-empty set of elements) and a meaning for each predicate symbol. For example, \( D = \{1, 2\} \) and \( P(x) : "x > 0" \) is an interpretation for the statement \( \forall x \in D, P(x) \) (in this case, one that happens to make the statement \textbf{True}). For each statement below, provide one interpretation under which the statement is true and another interpretation under which the statement is false — if either case is not possible, explain why clearly and concisely.

(a) \( \forall x \in D, \forall y \in D, P(x, y) \)

(b) \( (P \land Q) \Rightarrow (P \lor Q) \)

(c) \( (\forall x \in D, \exists y \in D, P(x, y)) \Rightarrow (\exists y \in D, \forall x \in D, P(x, y)) \)
