Write a specification for a computation that repeatedly reads an input on either channel $c$ or $d$. The specification says that the computation might begin with either channel, and after that it alternates.

After trying the question, scroll down to the solution.
The specification is $C \lor D$, where

$C = c \ldots D$
$D = d \ldots C$

Another solution is $(ok \lor c) \ldots P$, where

$P = d \ldots c \ldots P$
