Information Systems Analysis and Design CSC340

The Three-Tier Architecture Revisited

- User interfaces for an information system are part of the presentation layer in the three-tier architecture.
- The three-tier architecture separates cleanly user interfaces from application logic/business classes and from data storage components of the system.
- Business classes "know nothing" of how their (business) objects will be presented to the users.

Information Systems Analysis and Design CSC340

Prototyping the Dialogue

- Prototyping can be used to determine what the interface will look like.

Information Systems Analysis and Design CSC340

Another Class Diagram

- This can also be represented as a class with the graphical components that make it up as attributes.

CBWindow

clientLabel
campaignLabel
budgetLabel
checkButton
closeButton
budgetTextField
clientChoice
campaignChoice

Packages for Interface Classes

- Package diagram shows the dependencies between interface classes in different packages.

```

    graph LR
      subgraph "User Interface Package"
        AWT[AWT]
        AppWin[Application Window]
        AWT -->|import| AppWin
      end
  
```

© 2002 Jaelson Castro and John Mylopoulos Object-Oriented Interface Design -- 8

Information Systems Analysis and Design CSC340

Revised Class Diagram

- Composition shows that a dialogue box is made up of other components from the AWT package.

```

    classDiagram
      class AWTDialog["AWT::Dialog"]
      class CBWindow
      class AWTButton["AWT::Button"]
      class AWTChoice["AWT::Choice"]
      class AWTLabel["AWT::Label"]
      class AWTTextField["AWT::TextField"]
      AWTDialog --|> CBWindow
      CBWindow *-- AWTLabel : 3
      CBWindow *-- AWTButton : 1
      CBWindow *-- AWTTextField : 1
      CBWindow *-- AWTChoice : 2
  
```

Information Systems Analysis and Design CSC340

Prototyping the Dialogue

- There are several ways for entering the Client and Campaign name:
 - Use a separate look-up window for each class;
 - Allow the user to enter a part of a name, then have the system return a list of close matches;
 - Use a tree data structure to show clients and campaigns in a tree-like hierarchy.
