

CSC104, week #1 lab, fall 2017

No quiz the first week, but you are responsible for the following:

1. install **DrRacket**, the programming environment you will use during the course, and your favourite machine. TAs and instructor will be in BA3175 10–3 during Wednesday office hours to help. Almost all course materials (lectures, tutorials, etc.) will require DrRacket to access them, so get this set up early.
2. Install the CSC 104 language:
 - In DrRacket go to the pulldown File/Package Manager menu, and type in csc104 in the box beside Package Source. Click Install.
3. sign in to your CDF account and change your password. You may **do this with your favourite web browser**, or while physically present in one of the **CDF labs**, and you'll need to know your **UtorId**. This account allows you to submit course work online, and has DrRacket pre-installed.
