"I tend to talk about footnotes. Anthropomorphism = cars’ headlights. What does it mean for machines to have minds?"

- Nim Chomsky

Bill Seager: Princess and Descartes: how does $F \Rightarrow F$? Descartes: good (best?) quest. It is a ‘primitive’ fact.

Descartes:
- hydrodolies of the brain: fluid enlarges
- pineal gland is not dual like symmetry of brain
- intentionality: to be about nothing
- plb formula: $\mu$

$S$ syntactic domain
$I$ semantic interpret.
$D$ semantic domain

Skolem was saying that since we can get models working in count. vs uncount. acting as reals. Then human brain can go beyond logic.

"In going to allow it."

"I don’t know, ask my neighborhood."

""
Bill Seager: I love conceptual realism VAT "jar, tub" DINE

original meaning (beyond formal semantics): self-organising map

Epigenetics formal symbol pushing cannot afford flexible repe

LOTU: Cytokindtly (abolism Sluzin) adaptive mechanisms

Wed 2:30 - 3:30 oh Bill Seager

e.g.
AI fore chess playing
.prop is taking out like
queen early, but no
such superchicine:
emergent effect?

Co patterns in consequence

Bill Seager task us scale

E.g. PV = mRT

all package in every

dinner (2nd law) but
it is possible for them to go back; 2nd law is thus probabilistic

I think

[Diagram]

modeling

convergence

loop bubble waits for

upper Lub

lower Lub

less thermodynamics:
1. can't win
2. can't break even
3. can't osteo play
Bill Seager:  

parallelism — 2 worlds (Leibniz) 
occasionalism — a god is responsible for cause -> effect 
epistemic nominalism — ?
idealism — 4 world is system of neural states 
naturalism — opposite view 

behaviorism: only behavior is

introspection: system of concepts allowing forms of prop.
 attitude

— introspective conscious neural state is prop. attitude
 prop attitude $A$ = mental state $M$ — folk $4$
 folk $4$ can predict behavior but not mental accurate
 empirical: child before $4$ folk psy is not learned

belief — smarter = rocks, kid: there's rocks, parent says what do you think parent believes kid: rocks.

desire = same: kid thinks parent wants teddy bear instead of book

$\Rightarrow$ after $4$, folk $4$ is learned and kids can now predict behavior more accurately

unexpressible thoughts like sensory exp $\Rightarrow$ atmospheres

LOTH is a formal language

Fodor: Chomsky's arg $\Rightarrow$ LOTH

Morpheme = smallest unit of meaning
For games: be able to fulfills sense of fun. If everyone plays correctly, draw

Original meaning of (by Haugeland): integrated automatic formal system.

Frozen so have to add senses:

- Fred bel:

- P.M. in Asia

P.M. = S. H. * Fred's KB

analytic sense: bedalons aren't needed so substitution cannot be done

synthetic sense: X is a bedalon without

- no conceptual aristocracy?

Realm of symbols

- meanings

- reference

- nonexistent objects no substitute in meaning (not reference)

- Chinese Room (Searle) vs. Turing Test

- no original intention (strong AI) but derived
  intentionality (weaker AI)

- multiple realizability of automatic formal sys
  breaks down in only certain systems can
  offend causal props necess for emergence of
  original intentionality.
