SystemRescueCd description

Ads by Google Hard Disk Recovery Linux Linux Data Recovery Ubuntu Linux System

A bootable CDROM image with many system tools.

SystemRescueCd is a Linux system available from a bootable CDROM that provides an easy way to perform administrative tasks on your computer, such as creating and editing the partitions of the hard disk or backing up data.

SystemRescueCd contains a lot of system utilities (such as parted, partimage, and fstools), and basic programs (such as editors, midnight commander, and network tools).

It also includes QtParted, a Partition Magic clone that makes editing partitions easy with its Qt graphical user interface. This CDROM aims to be very easy to use and accessible to everybody.

Here are some key features of "SystemRescueCd":

- GNU Parted is the best tool for editing your disk partitions under linux
QtParted is a Partition Magic clone for Linux.
Partimage is a Ghost/Drive-image clone for Linux
File systems tools (e2fsprogs, reiserfsprogs, xfsprogs, jfsutils, ntfsprogs, dosfstools): they allow you to format, resize, debug an existing partition of your hard disk
Sfdisk allows you to backup and restore your partition table

What's New in This Release: [read full changelog]

- Updated standard kernels to linux-3.0.13 (rescuecd + rescue64)
Updated alternative kernels to linux-3.1.5 (altker32 + altker64)
