DEDUCTIONS

– 5 (out of 50 for correctness) for any of the following:

- Disregard for the assignment specifications (i.e., the TA having to modify student's code just so that the Tester Class compiles). Examples include:

    o Spelling errors in the method headers.

    o Errors in the number, type, or order of method parameters.

- Adding instance or class variables that have *not* been specified in the assignment description.

- Using arrays, Vectors, ArrayLists, or any other sort of lists.
