

APS101 lab 9 – week 11

This document contains the instructions for the week 11 APS101 lab.

1 Objectives

1. Do more work with arrays.

2 Arrays

In this lab you will be working with `int[]`s and `int[][]`s.

Get the file `ArrayStuff.java` from the course website:

<http://www.cs.toronto.edu/~yaroslav/teaching/w09/aps101/labs.shtml>

It has a `main` method that calls various other methods. It compiles and runs, but the methods are only stubs. Fill in the bodies in the order they appear.

After each one, compile and test it, and then swap navigator and driver.
