

# Tutorial 6

## Aspect-oriented programming

How to program an aspect?  
Tool support in aspectJ, AJDT

Spring 2005

ECE450H1S

Software Engineering II

Last lecture...

## On Aspect-Orientation

- We explained the concepts of aspect-orientation: a recent paradigm in Software Engineering
- We shown a case study of aspect-oriented requirements engineering: (1) how to identify early aspects along with goal-oriented requirements analysis, (2) how the goal aspects are associated with the code aspects ...
- What are code aspects?

Spring 2005

ECE450H1S

Software Engineering II

## Today...

This tutorial will cover code aspects:

1. AOP examples
2. aspectJ syntax
3. Eclipse/AJDT toolset
4. Relation to the OpenOME
5. How to deploy of our phase B results ...

Spring 2005

## 1. AspectJ

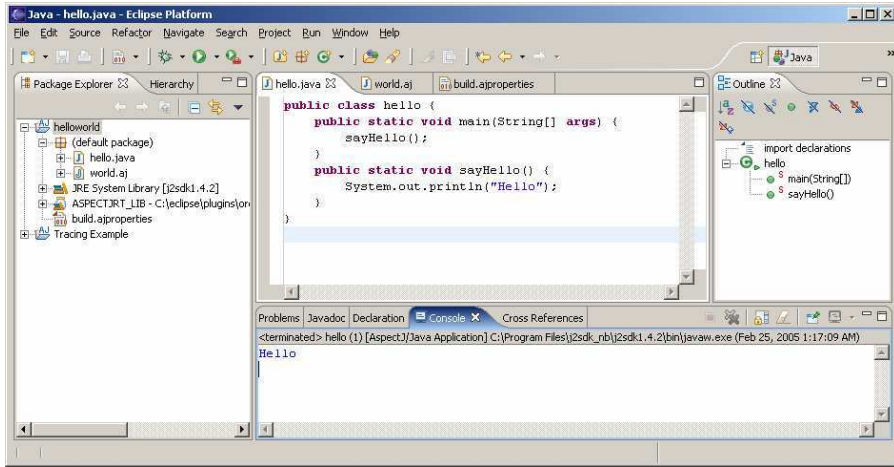

- It is one of the most mature aspect compilers <http://www.eclipse.org/aspectj>
- It has convenient tool support through Eclipse <http://www.eclipse.org/ajdt>

Spring 2005

# 1.1 Example: the Hello class

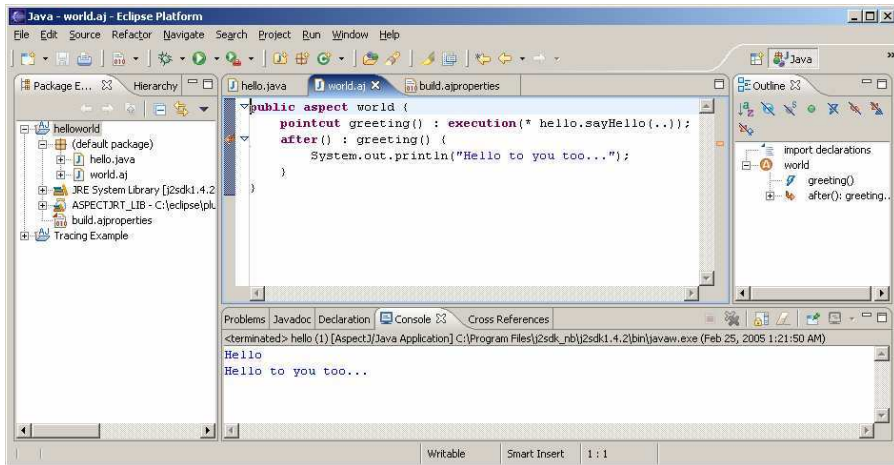

See the online tutorial

# 1.2 Enable the World aspect

# 1.3 Run the woven code

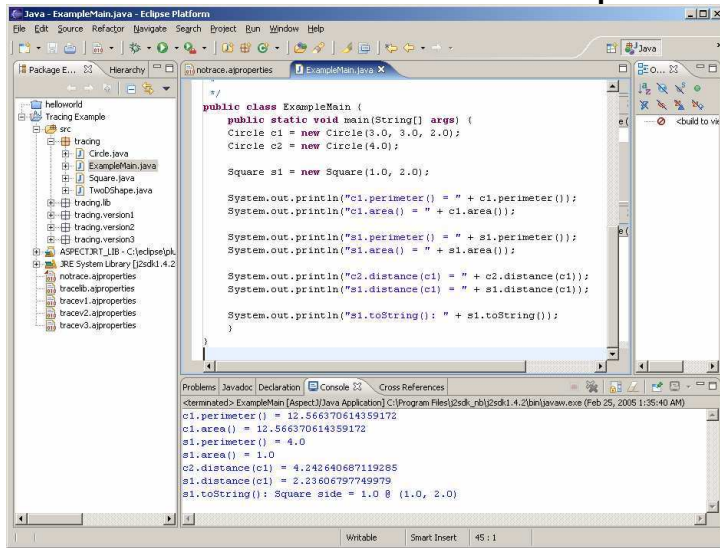

# 2 The AspectJ syntax

- *aspect* vs. *class*
- *advice* vs. *method*
  - **before()**, **after()**, **around()**
  - allow formal parameters in regular expressions
  - special parameter **joinpoint**
  - allow "theJoinPoint" to access the call stack
  - **around()** can call the replaced method with **proceed()**
- (anonymous) *pointcut* vs. *expression*
  - just like any boolean expression, where the predicates are **joinpoints**
- *joinpoints*
  - **call()**, **execute()**: method calls (caller), execution (callee), try/catch blocks
  - **set()**, **get()**: field accesses
  - **within()**: to limit the scopes to method, class or packages
- *declarations*
  - Change the class structures: introducing fields, method, structural relations

## Reference

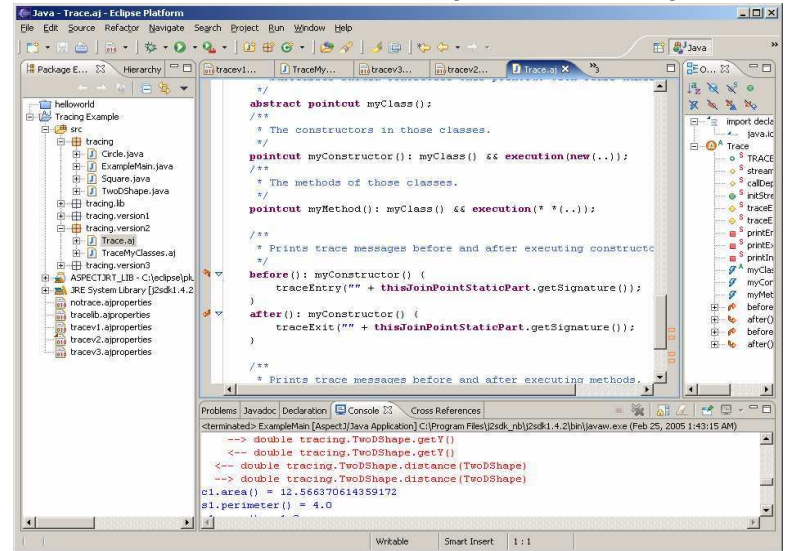

The "quickref" document:

### 3.1 The tracer ex. without aspect

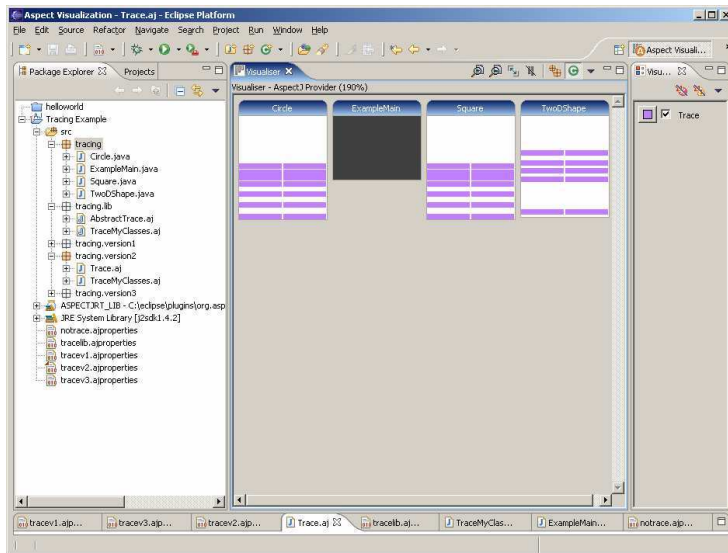

Spring 2005 ECE450H1S Software Engineering II

### 3.2 The Tracer example with aspect

Spring 2005 ECE450H1S Software Engineering II

### 3.3 A visualizer

Spring 2005 ECE450H1S Software Engineering II

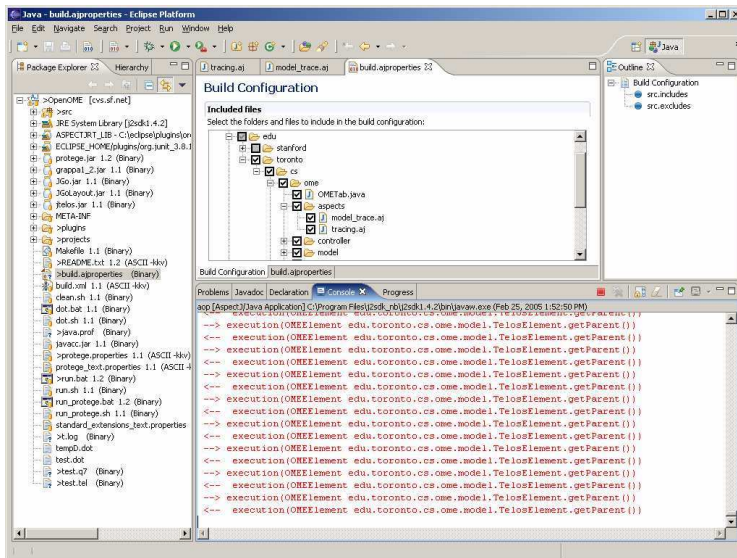

## 4. Applying to the OpenOME

- I would show you an AOP example in OpenOME, however ...
- AJDT requires more Memory resources, when I was compiling it with the complete OpenOME ... Memory overflow problem
- Gold plating in AJDT?

## 5. Hosting the course projects

- We have 11 teams, codenames are: *mindz*, *photons*, *team2*, *xteam*, *lumiere solutions*, *mugqq*, *overnight enterprise*, *team7*, *websilon*, *team9*, *canadiantired*
- Any windows ECF lab, use "terminal services", the first server is **dedicated** for us, enter your team's code name as username, "ece450" as password for now, you can access it, only within the lab for now
- The URL of the tomcat server is <http://127.0.0.1:8080>
- The deployed web service should be placed under c:\program files\apache software foundation\tomcat 5.5\webapps\axis\WEB-INF\classes\- These directories are shared as <\\128.100.36.17><codename> so that you can copy the binary files into the place
- We also installed an Eclipse plugin for collecting metrics in the ECF windows lab
