Lecture 8: Stakeholder Goals

- **Boundaries**
  - Scoping the problem
- **Stakeholders**
  - Identifying the problem owners
- **Goals**
  - Identifying the success criteria
- **Scenarios**
  - Using concrete examples to understand the problem

Where do we start?

- Identify the problem
  - What is the objective of the project?
  - The “vision” of those who are pushing for it?
    - e.g., “Meeting scheduling is too costly right now”
- Scope the problem
  - Given the vision, how much do we tackle?
    - e.g., “Build a system that maintains people’s calendars” ...
- Choose a business process
  - Given the problem, what is the appropriate business process for solving it?
    - e.g., “Anyone who wants to schedule a meeting goes to the secretary, gives details and the secretary handles the rest” ...
- Choose among alternatives
  - Given a business process, what parts should be automated, and how?
    - e.g., “Solution arrived at interactively by secretary and computer” ...

Requirements Elicitation

- Starting point
  - Some notion that there is a “problem” that needs solving
    - e.g., dissatisfaction with the current state of affairs
    - e.g., a new business opportunity
    - e.g., a potential saving of cost, time, resource usage, etc.
- Collect enough information to:
  - Identify the “problem”/“opportunity”
    - Which problem needs to be solved? (identify problem Boundaries)
    - Where is the problem? (understand the Context/Problem Domain)
  - Whose problem is it? (identify Stakeholders)
  - Why does it need solving? (identify the stakeholders’ Goals)
  - How does the problem manifest itself? (collect some Scenarios)
  - When does it need solving? (identify Development Constraints)
  - What might prevent us solving it? (identify Feasibility and Risk)

Identifying the Problem

- Vague problem stated by the customer:
  - E.g., university textbook store:
    - Manager wants to computerize the book order forms filled out by instructors:
  - E.g., A large insurance company:
    - Claims manager wants to cut down the average time it takes to process an insurance claim from 2 months to 2 weeks
  - E.g., A telecommunications company:
    - CIO wants to integrate the billing system with customer record systems of several affiliates, so there is only one billing system...
  - E.g., Large Government Aerospace Agency:
    - The president wants to send a manned mission to Mars by the year 2020

- Often you only see symptoms rather than causes:
  - E.g., “Ontario patients needing X-ray scans have to wait for months”
  - The long wait is the symptom, not the problem. The problem may be:
    - Shortage of X-ray machines;
    - Shortage of trained staff;
    - Shortage of doctors to process the data
    - Inefficient scheduling procedures

W6H

The journalist’s technique:
- What?
- Where?
- Who?
- Why?
- When?
- How?
(Which?)
Stakeholders

- **Stakeholder analysis:**
  - Identify all the people who must be consulted during information acquisition

- **Example stakeholders**
  - **Users**
    - concerned with the features and functionality of the new system
  - **Designers**
    - want to build a perfect system, or reuse existing code
  - **Systems analysts**
    - want to "get the requirements right"
  - **Training and user support staff**
    - want to make sure the new system is usable and manageable
  - **Business analysts**
    - want to make sure "we are doing better than the competition"
  - **Technical authors**
    - will prepare user manuals and other documentation for the new system
  - **"The customer"**
    - wants to complete the project on time, within budget, with all objectives met.

Finding stakeholders: The Org Chart

- **Organization charts show**
  - Areas of responsibility (flows upwards)
  - Lines of authority (delegated downwards)
  - A useful tool for figuring out where the stakeholders are

Finding Stakeholders: Levels of authority

- **Top management**
  - establishes goals
  - does long-range planning
  - determines new market & product developments
  - decides on mergers & acquisitions.

- **Middle management**
  - sets objectives
  - allocates & controls resources
  - does planning
  - measures performance

- **Lower management**
  - supervises day-to-day operations
  - takes corrective action when necessary.

- **Operational level**
  - performs day-to-day operations

Identifying Stakeholders’ Goals

- **Approach**
  - Focus on why systems are constructed
  - Express the ‘why’ as a set of stakeholder goals
  - Use goal refinement to arrive at specific requirements
  - Goal analysis
    - document, organize and classify goals
    - Goal evolution
      - refine, elaborate, and operationalize goals
  - Goal hierarchies show refinements and alternatives

- **Advantages**
  - Reasonably intuitive
  - Explicit declaration of goals provides sound basis for conflict resolution

- **Disadvantages**
  - Captures a static picture – what if goals change over time?
  - Can regress forever up (or down) the goal hierarchy
Goal Modeling

- **(Hard) Goals:**
  - Describe functions that must be carried out. E.g.
    - Satisfaction goals
    - Information goals
  - Softgoals:
    - Cannot really be fully satisfied. E.g.
      - Accuracy
      - Performance
      - Security
- Also classified temporally:
  - Achieve/Cease goals
    - Reach some desired state eventually
  - Maintain/Avoid goals
    - Keep some property invariant
  - Optimize
    - A criterion for selecting behaviours

Agents:
- Owners of goals
- Choice of when to ascribe goals to agents:
  - Identify agents first, and then their goals
  - Identify goals first, and then allocate them to agents during operationalization

Modelling Tips:
- Multiple sources yield better goals
- Associate stakeholders with each goal
  - Reveals viewpoints and conflict
- Use scenarios to explore how goals can be met
- Explicit consideration of obstacles helps to elicit exceptions

Example Goal Elaboration

- **Crucial planning decision be made**
- **Decision be made by email discussion**
- **Meeting be requested**
- **Attendee list obtained**
- **AV & other needs defined**
- **Attendees' preferences known**
- **Date and location set**
- **Meeting be held**
- **Minutes be circulated**
- **Agenda be defined**
- **Meeting be scheduled**
- **Meeting announced**
- **Attendance confirmed**
- **Changes be handled**
- **Attendance details**

Goal Analysis

- **Goal Elaboration:**
  - "Why" questions explore higher goals (context)
  - "How" questions explore lower goals (operations)
  - "How else" questions explore alternatives
- **Relationships between goals:**
  - One goal helps achieve another (+)
  - One goal hurts achievement of another (-)
  - One goal makes another (++)
  - One goal breaks another (--) (achievement of one goal prevents achievement of another)
- **Precedence ordering** - must achieve goals in a particular order
- **Obstacle Analysis:**
  - Can this goal be obstructed, if so how?
  - What are the consequences of obstructing it?

Softgoals

- Some goals can never be fully satisfied
  - Treat these as softgoals
  - E.g. "system be easy to use; "access be secure"
  - Also known as 'non-functional requirements'; 'quality requirements'
- Will look for things that contribute to satisficing the softgoals
  - E.g. for a train system:
### Softgoals as selection criteria

- **minimize costs**
- **improve safety**
- **serve more passengers**
- **minimize development costs**
- **minimize operation costs**
- **reduce staff**
- **automate collision avoidance**
- **automate braking**
- **hire more operators**
- **buy new rolling stock**
- **add new tracks**
- **increase train speed**
- **reduce travel time**
- **maintain passenger comfort**
- **maintain safe distance**
- **cleaner signalling**
- **reduce development time**
- **more frequent trains**

---

### Example Scenario

**Title:** Successful meeting scheduled using messaging option

**Participants:** Alice (initiator, not attending); Bob, Carlo, Daphne (attendees)

<table>
<thead>
<tr>
<th>Action</th>
<th>Goals satisfied</th>
<th>Obstacles / Problems</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alice requests meeting, specifying participants, timeframe</td>
<td>Meeting requested; Attendees list obtained</td>
<td>What if selected timeframe is infeasible?</td>
</tr>
<tr>
<td>AS sends participant requests to Bob, Carlo and Daphne</td>
<td>?</td>
<td>Did we miss a goal?</td>
</tr>
<tr>
<td>Bob reads message</td>
<td>Participants informed</td>
<td>Can’t detect when messages are read; what happens if Bob reads the message but doesn’t reply?</td>
</tr>
<tr>
<td>Carlo reads message</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Daphne reads message</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Bob replies with preferences</td>
<td>Attendees preferences known</td>
<td>What if the preferences are mutually exclusive? Should we allow some to be higher priority?</td>
</tr>
<tr>
<td>Carlo replies with preferences</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Daphne replies with preferences</td>
<td></td>
<td></td>
</tr>
<tr>
<td>AS schedules meeting</td>
<td>Room availability determined; room booked</td>
<td></td>
</tr>
<tr>
<td>AS notifies Alice, Bob, Carlo, Daphne of time and location</td>
<td>Meeting announced; Attendance Confirmed (?)</td>
<td>How do we know if they’ve all read the announcement? What if the schedule is no longer convenient for one of them?</td>
</tr>
</tbody>
</table>

---

### Scenarios

- **Scenarios**
  - Specific sequence of interaction between actor and system
  - Tend to be short (e.g. between 3 and 7 steps)
  - May be:
    - positive (i.e. required behavior)
    - negative (i.e. on undesirable interaction)
    - May be indicative (describe current system) or optative (how it should be)

- **Advantages**
  - Very natural: stakeholders tend to use them spontaneously
  - E.g. “suppose I’m admitted to hospital - what happens during my admission?”
  - Typical answer: “You, or the person accompanying you would talk to the person at the admissions desk. You have to show your OHIP card and explain who referred you to the hospital. Then you…” (and so on)
  - Short scenarios very good for quickly illustrating specific interactions

- **Disadvantages**
  - Lack of structure:
