CSC 401/2511: Natural Language Computing

**Instructors:** Frank Rudzicz, Raed Saqur, and Zining Zhu

**Email:** csc401-2022-02@cs.toronto.edu

**Lectures:** MW 10h–11h, 11h-12h; Zoom initially; LM 162 thereafter.

**Office hours:** TBD, TBD

**Tutorials:** F 10h-11h, 11h-12h; Zoom initially; LM 162 thereafter.

**Web-page:** [http://www.cs.toronto.edu/~frank/csc401/](http://www.cs.toronto.edu/~frank/csc401/)

**Forum:** Piazza

This course presents an introduction to natural language computing in applications such as information retrieval and extraction, intelligent web searching, speech recognition, and machine translation. These applications will involve various statistical and machine learning techniques.

**Prerequisites:** CSC 207 or 209 or 228, and STA 247 or 255 or 257 and a CGPA of 3.0 or higher or a CSC subject POS. MAT 223 or 240 is strongly recommended.

**Evaluation policies**

CSC401/2511 students will be marked on three homework assignments and a final exam. The relative proportions of these marks are as follows:

- Assignment with lowest mark 15% language: Python
- Assignment with median mark 20% language: Python
- Assignment with highest mark 25% language: Python
- Final exam 40%

Graduate students enrolled in CSC2511 will have the option of undertaking a course project instead of the assignments in teams of at most two students for 60% of the course mark; all graduate students need to pass the final exam, which is worth 40% of the final mark. All code must run on the teaching machines.

Note that a 24-hour ‘silence policy’ will be in effect – we do not guarantee that the instructors or TAs will respond to your request within 24 hours of an assignment’s due time.

**Lateness**

A 10% (absolute) deduction is applied to late homework one minute after the due time. Thereafter, an additional 10% deduction is applied every 24 hours up to 72 hours late at which time the homework will receive a mark of zero. No exceptions will be made except in emergencies, including medical emergencies, at the instructor’s discretion.

**Final exam**

The final exam will be a timed 3-hour test. A mark of 50% or higher on the final exam is required to pass the course. In other words, if you receive a mark lower than 50% on the final exam then your final mark in the course will be no higher than 47%, regardless of your performance in the rest of the course.
Academic offences

No unauthorized collaboration on the assignments is permitted. The work you submit must be your own. ‘Collaboration’ in this context includes but is not limited to sharing of source code, correction of another’s source code, copying of written answers, and sharing of answers prior to submission of the work (including the final assessment). Failure to observe this policy is an academic offence, carrying a penalty ranging from a zero on the homework to suspension from the University. See the academic integrity page of the University of Toronto at http://www.artsci.utoronto.ca/osai/students.

Readings

See website for additional readings.

Planned topics

- Introduction to corpus-based linguistics
- N-gram models and linguistic features
- Entropy and information theory
- Hidden Markov models
- Machine translation (statistical and neural)
- Neural language models and word embedding
- Articulatory and acoustic phonetics
- Automatic speech recognition
- Speech synthesis
- Information retrieval
- Dialogue and chatbots

Planned course calendar

See Academic dates & deadlines for undergraduate students and Sessional dates for graduate students for any changes.

10 January  First lecture
17 January  Last day to add CSC 2511
23 January  Last day to add CSC 401
11 February  Assignment 1 due
20 February  Last day to drop CSC 2511
21–25 February Reading week – no lectures or tutorial
11 March  Assignment 2 due
14 March  Last day to drop CSC 401
  8 April  Last lecture
  8 April  Assignment 3 due
  8 April  Project final report due
TBD April  Final exam

See course website for details.
