

## Disability and Software Accessibility Module – homework reflection

Complete **one** of the following [min. 250 words]:

1. Describe a feature that you could add to a software project that would make it more accessible to some group of people with disabilities. Using some of the material in the first embedded ethics module, argue whether your proposed feature better reflects the medical model of disability or social model of disability. In other words, does it treat your users as though their disability is medical or social?

2. Describe a feature that you could add to a software project that would make it more accessible to some group of people with disabilities. Imagine that you are helping to implement your project as an intern for some organization. Using some of the material in the second embedded ethics module, persuade your immediate manager at work that they should allocate resources (including your time) implementing your proposed feature.
