Bayesian Networks

Alice Gao Lecture 12 Readings: RN 14.2. PM 8.3.

Learning Goals

D-Separation

Constructing Bayesian Networks

Revisiting the Learning goals

CS 486/686: Intro to Artificial Intelligence

Alice Gao 2 / 26

By the end of the lecture, you should be able to

- Determine whether an independence relationship holds by applying d-separation.
- Given a Bayesian network and an order of the variables, construct a Bayesian network that correctly represents the independence relationships among the variables.

D-Separation

Constructing Bayesian Networks

Revisiting the Learning goals

D-Separation

Are two variables X and Y independent given the set of observed variables E?

Definition (D-Separation)

E d-separates X and Yiff E blocks every un-directed path between X and Y.

If E d-separates X and Y, then X and Y are independent given E.

Blocked Path - Scenario 1/3

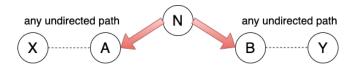

If N is observed, then it blocks the path between X and Y.

CS 486/686: Intro to Artificial Intelligence

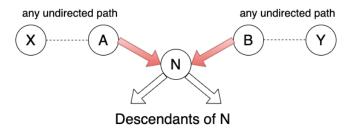

Alice Gao 6 / 26

Blocked Path - Scenario 2/3

If N is observed, then it blocks the path between X and Y.

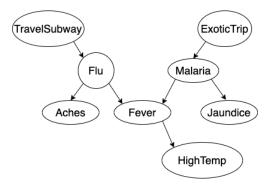

Blocked Path - Scenario 3/3

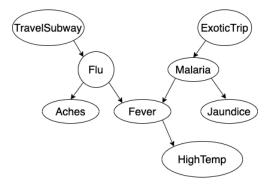

If N and N's descendants are NOT observed, then they block the path between X and Y.

CS 486/686: Intro to Artificial Intelligence

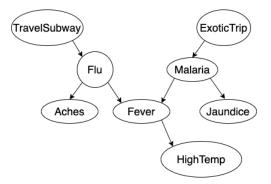

CQ 1a: Are TravelSubway and HighTemp independent?

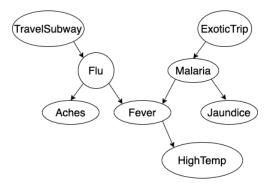

CQ 1b: Are TravelSubway and HighTemp independent given Flu?

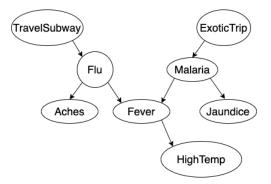

CQ 2a: Are Aches and HighTemp independent?

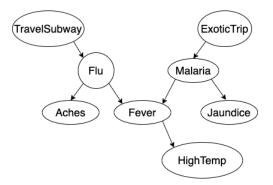

CQ 2b: Are Aches and HighTemp independent given Flu?

CQ 3a: Are Flu and ExoticTrip independent?

CQ 3b: Are Flu and ExoticTrip independent given HighTemp?

Constructing Bayesian Networks

Revisiting the Learning goals

Constructing Bayesian Networks

 For a joint probability distribution, there are many correct Bayesian networks.

 Given a Bayesian network A, a Bayesian network B is correct if and only if

If Bayesian network B requires two variables to satisfy an independence relationship, Bayesian network A must also require the two variables to satisfy the same independence relationship.

Prefer a Bayesian network that requires fewer probabilities.

Requiring an Independence Relationship

Having an edge between two variables DOES NOT mean that the two variables are DEPENDENT.

The absence of an edge between two variables MEANS that the two variables satisfy an INDEPENDENCE relationship.

Constructing a Correct Bayesian Network

- 1. Order the variables $\{X_1, \ldots, X_n\}$.
- 2. For each variable X_i in the ordering,
 - 2.1 Choose the node's parents:

Choose the smallest set of parents from $\{X_1, \ldots, X_{i-1}\}$ such that given $Parents(X_i) X_i$ is independent of all the nodes in $\{X_1, \ldots, X_{i-1}\} - Parents(X_i)$. Formally,

 $P(X_i | Parents(X_i)) = P(X_i | X_{i-1} \land \dots \land X_1).$

- 2.2 Create a link from each parent of X_i to the node X_i .
- 2.3 Write down the conditional probability table $P(X_i | Parents(X_i))$.

Example 1: Construct a Bayes Net

Consider the Bayesian network.

Construct a correct Bayesian network by adding the variables in the order: W, A, and B.

Example 1: Construct a Bayes Net

Consider the Bayesian network.

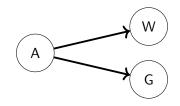

Construct a correct Bayesian network by adding the variables in the order: W, A, and B.

Example 2: Construct a Bayes Net

Consider the Bayesian network:

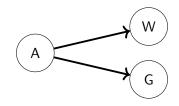

Construct a correct Bayesian network by adding the variables in the order: W, G, and A.

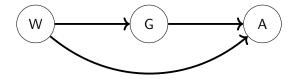

Example 2: Construct a Bayes Net

Consider the Bayesian network:

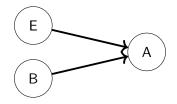

Construct a correct Bayesian network by adding the variables in the order: W, G, and A.

Example 3: Construct a Bayes Net

Consider the Bayesian network.

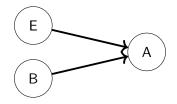

Construct a correct Bayesian network by adding the variables in the order: A, B, and E.

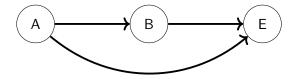

Example 3: Construct a Bayes Net

Consider the Bayesian network.

Construct a correct Bayesian network by adding the variables in the order: A, B, and E.

Constructing a Compact Bayesian Network

What does an edge mean?

Does an edge always represent a causal relationship?

How can we construct a Bayesian network with the smallest number of edges? By the end of the lecture, you should be able to

- Determine whether an independence relationship holds by applying d-separation.
- Given a Bayesian network and an order of the variables, construct a Bayesian network that correctly represents the independence relationships among the variables.
